

DR. SEGIN CHANDRAN

PROFILE

An eminent maxillofacial surgeon from Kerala with 20 years of experience in dentistry, 14 years in oral Implantology and 10 years in maxillofacial surgery and reconstruction. From last 5 years into digital protocols in dentistry and surgery. He was an associate professor in maxillofacial surgery and now to full time dental and surgical practice. He is the founded director and chief surgeon at Kamala Dental Specialty Hospital, Trivandrum - an advanced center for dentistry, Implantology and maxillofacial surgeries. He is a consultant to many trauma centers in Trivandrum. Sought after speaker in the field of oral implantology and he's known for his passion and dedication in experimenting and adapting new protocols, talking today on the subject how to refine our implant practice with most modern protocols yet not diluting the basic principles.

“HOW I REFINED MY IMPLANT PRACTICE”

Implant surgery is a nightmare for many. A surgeon who wanted to see his client's smiling face after the surgery will surely think about minimally invasive but precise and predictable options. Refining and re-defining implant practice suiting to the needs of new faster generation demanding so much in terms of comfort, time and precision. When patient expectations are such high, we clinicians need to change our protocols to minimally invasive yet precise, immediately loading and aesthetically acceptable solutions. Let go through the changes incorporated in my practice during last few years and how it made life easy for me and my clients. Clinically successful and well appreciated by our clients - win-win situation for an emerging implant practice.
