## “Posterior Maxilla: A Clinician's Dilemma”

In most cases, restoring the posterior maxilla is a challenge. We are faced with a different challenge with each patient. Due to the various patterns of resorption in maxilla , there is no one size fits all solution for these patients. We can restore these with various treatment modalities like zygomatic implants, tuberosity implants, osseo-densification, direct & indirect sinus lift and all on 4 concept. The aim of my presentation is to elucidate the most appropriate surgical solutions to restore the maxilla with optimised results and minimum complications.
