She has published various articles both nationally and internationally. She maintains a successful private practice at Navi Mumbai for the past 16 years.

## “Fundamentals of Khoury Technique”

One of the most frustrating and exasperating instances for a clinician is to find insufficient bone at the implant site. Often, the implantologists find themselves in a scenario that requires some form of augmentation prior to implant placement. Autogenous bone has been the gold standard when it comes to predictable, stable and long term bone regeneration. This lecture discusses the fundamentals of autogenous bone regeneration using the Khoury technique. It will emphasize the relevance of the technique and the clinical and surgical tips required to perform the procedure. It will discuss the possible complications involved in the procedure and the ways to avoid them.
