## **“Evidence based Implant Dentistry- Putting Things into Perspective”**

Implant therapy is a very highly successful modality that has revolutionized treatment planning approach for the benefit of our population. Our understanding of how and why some things work so well, and some don't, is still ambiguous. The force of commerce and influence of some personalities often make clinician make choices without adequate scientific evidence. However good quality literature, experience, training & unbiased education can help our patients with services provided of the highest standards. This presentation looks at what we know so far, and some hot issues that we don't know much about in a pragmatic manner.
