Software Guided Surgery
(Nobel guide) training at
Las-Vegas, USA.
Bone Augmentation and
Sinus Surgery at AIC –
S. Korea

Dental Implantologist &
Cosmetic Surgeon
Director - Vardan Dental
Implant Institute

In the era of Implantology, always there is importance of the Fixture (Implant) placement in perfect anatomical areas to support functional and aesthetic prosthesis. With the development of technology specifically in Digital era, Dental Implant placement with Radiographic (scan) changed the ease of surgical procedure.

Now today going further, with Digital guided technology has gone one step further for precision and comfort for Both patient and operator. Digital Guided surgical Procedure for Implant placement as well as prosthesis placement becoming popular and easy tool.

With time in Digital guided procedure, number of new technics emerged, i.e.- stereolithography, 3D printing and also Navigation systems (Real time Navigation during surgery)

Different biomaterials, scanning protocol, Surgical protocol and Prosthetic selection and option are the key concern in this modern technic which enables Surgeon for Easy, Precise and Predictable Implant placement and Restoration.
