DDS, PhD

## "Guided Implantology- from Planning to Clinical Application"

Lecture describes management of guided implant procedures from hard and soft tissues evaluation through backward planning concept with wax-up or virtual wax- up application in different clinical situations. Procedures, elements and tools necessary to design, perform and clinical application of guide will be discussed. We will get to know about evolution of guided surgeries, accuracy and possible limitations, real advantages of guided surgeries, potential problems and how to manage or how to prevent them. Lecture is based on author clinical experience own studies as well as on review of EBD literature.
