

Providing a complete security solution

GAMMA Solution was founded in 2000 as a distributor and system builder for digital security and surveillance system with businesses running across Malaysia and gradually expanding to South-East Asia over the years.

It is an Intel Embedded Partner and an affiliate member of Intel Internet of Things Solution Alliance.

The range of products offered includes Internet of things (IoT) ready megapixels IP surveillance system with intelligent features such as facial recognition, licence plate recognition, video analytics, people counting, POS integration, access control and IoT Smart Home, among others.

Selling security hardware is only the tip of the iceberg of a complete security solution.

The ability to apply intelligent features such as video analytics and IoT integration play a major role in providing an effective security and surveillance solution based on customers' needs.

This includes, the type of CCTV camera, the video resolution and features required to capture and immediately process useful information for any incidents.

For example, what are the video analytics features that we can apply to improve the efficiency of our business operation and the effectiveness of security protection for our building?

Facial Recognition on edge device

Let your smart surveillance system recognise faces of VIPs or blacklisted individuals.

Or how can we manage 1,000 outlets that require centre monitoring, remote management, emergency intrusion detection and alarm notification, all from a single management site or how do we apply deep learning facial recognition and license plate recognition system to speed up the search of a person or vehicle at a specific location?

Having a system smart enough to help in making an accurate and quick decision will answer all these questions and this is where IoT comes into play.

Gamma Solution is not just another security hardware supplier but also a professional advisor and system designer for IoT-based digital security and surveillance solution.

The company is able to serve

customers throughout Malaysia with the support from its nationwide network of partners.

Gamma Solution was recently awarded The Star Outstanding Business Awards (SOBA) Platinum Award under the Best in Corporate Social Responsibility (CSR) category by sponsoring intel-embedded megapixels IP surveillance systems to 100 primary schools in Malaysia.

The purpose of the programme is to reduce crime and prevent kidnapping in schools.

The CSR programme is a success and warmly welcomed by each school.

The head of schools and chairperson of the Parent-Teacher Associations were delighted and impressed by the high-definition

Conventional CCTV

Megapixel Video

Conventional CCTV

Megapixel Video

Every video captured must be able to identify objects in detail, such as human faces and car plate numbers.

image quality recorded at high-risk hotspots such as school entrances and exits, student pick-up and drop-off areas.

"We took a step further because the children are our future.

"Thus, it is our responsibility to provide a safe and secure study environment for them," said Gamma Solution founder and

managing director Wan Yat Hon.

In accordance with the company's mission, Gamma Solution delivers effective solutions to "fight crime together for a secure society".
