Domestic Markets

Weekly wrap up:

This week, the Indian Rupee traded with a negative bias as markets had to deal with a host of uncertain events which kept the sentiments mostly dented. The local unit initially started at 65.07 levels and turned north as markets discounted RBI's decision to stop buyer's credits which lead to short term demand pressure in dollar. Also, the two day FOMC Monetary Policy Meeting was to start from Tuesday which was another reason why the markets were playing safe in turn keeping the Rupee pressurized. The negative sentiment continued on the next day too; pushing Rupee to its weekly low levels of 65.2450. Negative sentiments in local equities and higher global dollar were the primary reasons. On Wednesday, the Indian currency traded mostly in a range bound manner as investors refrained from making any risky bets coupled with continued RBI intervention at higher levels which kept the Rupee stable. On Thursday the local unit appreciated to 65.02 levels as markets discounted the release of FOMC Monetary Policy Statement that came in line with expectations. The committee decided to raise rates by 25 bps but forecasted at least two more hikes for 2018 along with a less hawkish tone than expected, which kept the global dollar pressurized against the majors. This worked in favor of the Indian currency. On the last trading day, the Indian currency initially traded with a weaker bias on back of negative sentiments in Asian markets and local equities after the US President Donald Trump hit China with around \$60 billion of trade tariffs. In a counter-move, China responded by hitting \$3 billion of US goods with sanctions. This created a wave of uncertainty in the markets leading the indices to trade in red. However, the Indian currency could not withstand the weakness and turned south on continued RBI intervention at higher levels coupled with IPO-related fund flows and dollar conversions by exporters ahead of the financial year end which acted as a positive factor for the local unit. The local unit made a weekly high level of 64.9725 and closed the week at 65.0050 levels.

For the week 26th Mar – 30th Mar 2018

Going Forward:

Coming week is a holiday shortened week with Thursday and Friday being a holiday. Hence, the next three days of the week could see the Indian Rupee trading in a range bound manner with a bias towards positive side mainly towards 64.80 levels. The recent hullabaloo happening in the US shall keep the American currency on the weaker side. The US President Donald Trump has imposed tariffs on about \$60 billion of Chinese goods, with the bulk of them likely to be focused on the high tech industry. In return, China announced \$3 billion reciprocal tariffs on the US imports. This has kept all other nations especially the Euro-zone in a cautious mode as a global trade war could create havoc to its economy. If this was not enough, the US President has passed \$1.3 trillion spending bill yesterday and ended several hours of confusion that was raised by a tweeted veto threat of a government shutdown. Though the spending bill has been passed markets are still unsettled by the recent uncertainty which could prompt them to stay in risk-off mode for a while. This could keep the price trend of the Indian Rupee a bit muted. Nevertheless, with huge forex reserves at its disposal the RBI shall intervene at higher levels and keep the Rupee stable. Also, the ongoing discussion to raise the cap of investment limits in government bonds could give a boost to the foreign inflows that could keep the Indian markets positive along with Rupee. The year-end conversions of Dollar by large Corporate along with RBI trying to keep rupee strong for yearly valuation closing shall lead rupee towards 64.60-64.70 levels. Not forgetting the IPO related inflows which is another factor why the Rupee could possibly trade in a positive trend in the next week. Towards the end of the week, we could witness bouts of volatility considering the Fiscal Year 2017-18 is coming to an end. Also, with Thursday and Friday being a holiday investors could unwind their portfolio and not carry forward their bets to avoid any uncertain and unpredictable events that could create jitters in the markets.

All in all, the recent volatility created by the US has already put the investors in a risk-off mode. Also, the recent buyer's credit crisis in India that had kept the Indian Rupee pressurized has faded a bit hence the local unit will mostly trade with a positive bias in the upcoming trading session. However, if any unusual event arises from the US which has already created huge jitters in the markets and is likely to create more in the near future, the RBI would definitely intervene in the markets and keep the Indian currency stable.

Advise:

Exporters are advised to cover their near term receivables on spikes towards 65.15-20 and higher levels. Importers are advised to cover their near term payable (One month) on dips towards 64.80 and lower levels.

Forward Market

6 - month Premium (in Paisa)

6 month forward premia opened the week at 137.50 paisa and initially blipped higher to 140.75 paisa. Facing resistance at these levels and giving a bearish close, the 6 month forward premia started to move lower and touched a low of 130.25 paisa. 6 month forward premia ended the week at 134.00 paisa.

Going Forward:

6 month forward premia has given a bearish close on the short term charts signalling an downmove towards 130.00 paisa. A convincing break and close below the same shall push it to 128.00 and 125.00 paisa. On the upside, key resistance lies at 140.00 and 143.50 paisa. Technical indicators are signalling a bearish momentum.

Key Support: 130.00, 128.00, 125.00

Key Resistance: 140.00, 143.50, 148.00

For the week 26th Mar – 30th Mar 2018

Domestic Market

Likely to move lower

Euro:

The Euro currency mostly traded in a volatile manner this week. It initially started off at 1.2282 levels and surged higher towards 1.2359 levels on back of weak global dollar as markets remained cautious ahead of the two day FOMC Monetary Policy Meeting that was to be held on Tuesday and Wednesday. This positive strength in the shared currency could not stand for long and the pair turned south owing to the disappointing release of economic sentiment data from Germany that came way lesser than the expected levels. Also, the American currency surged as markets were being optimistic that the US Feds would hike interest rates and be a bit hawkish which in turn kept the Euro currency pressurized. The Euro currency made a weekly low level of 1.2237. This weak trend could not continue for long and the shared currency surged higher on Wednesday. The US Federal Reserve raised rates by 25 basis points as expected. The committee forecasted at least two more hikes for 2018 instead of three which kept the global dollar pressurized against the majors. Also, the on-off threats on trade tariffs by the US President Donald Trump further pulled the US Dollar Index lower. This worked in favor of the Euro currency. Not only this, after months of rough rhetoric between Euro-zone and Britain both the nations announced that there would be a transition period following the UK's departure from the EU in March 2019. The transition deal will kick in at that time lasting until December 2020. This boosted the market sentiments which got carried away on the next day too. The Euro currency made a weekly high of 1.2388 levels. However, this strength in the shared currency was short-lived as the disappointing release of manufacturing and service data from Germany and France dented the demand for the shared currency. On the last trading day, the Euro currency surged higher once again on back of weak global dollar after the US President Donald Trump hit China with \$60 billion of trade tariffs. In a counter-move, China responded by hitting \$3 billion of US goods with sanctions. Not only this, the US President passed \$1.3 trillion spending bill and ended several hours of confusion that was raised by a tweeted veto threat of a government shutdown. All of these factors created a wave of uncertainty in the markets and kept the American currency on the lower side in turn helping the Euro. The Euro currency closed the week at 1.2351 levels.

Technical Outlook:

Week ahead: Cross is unable to break the support of 1.2240 levels while has given bullish close on the short term charts signalling an upmove towards 1.2450 levels. Any convincing break and close above the same shall push it to 1.2555 levels. However, any resistance at these levels shall reverse the trend in the pair towards 1.2360 and 1.2240 levels. Only a convincing break and close below the same shall open the gateway for a swift downmove towards 1.2200 and 1.2090 levels (strong support). Technical indicators are signalling a bullish momentum.

Key Support: 1.2240, 1.2200, 1.2090, 1.1930

Key Resistance: 1.2450, 1.2555, 1.2650

Advise: Exporters are advised to cover their near term receivables in a staggered manner on spikes towards 1.2450 and 1.2550 levels. Importers are advised to cover their near term payables on dips towards 1.2250 and cover further tenors if any dip towards 1.2100 levels.

International Markets

GBP/USD

GBP closed the week at 1.4132 levels.

Sterling:

The Cable currency traded higher this week. It initially started off at 1.3930 levels and immediately made weekly low levels of 1.3910 which was pretty much meagre. It then surged higher from thereon on account of weak global dollar as markets remained cautious ahead of the two days FOMC Monetary Policy Meeting that was to be held on Tuesday and Wednesday. This positive trend could not continue on the next day and the Pound currency slightly traded lower. Reason behind the same could be attributed to the cautiousness in the markets prior to the FOMC Monetary Policy and BoE Monetary Policy Statement release on the following day. Also, the disappointing release of inflation data from the nation added to the woes. The inflation rate declined to 2.7 percent which prompted the investors to reconsider their interest rate expectations. Apparently, with surge in UK's inflation rate markets believed that in this week's BoE Monetary Policy Meeting the committee members would hike rates however with the release of weak inflation data the possibility of a rate hike remained slim. On Wednesday, the Pound currency surged higher as markets discounted the release of FOMC Monetary Policy Statement where the committee raised rates by 25 basis points as expected. The committee forecast at least two more hikes for 2018 instead of three. Also, the on-off threats on trade tariffs by the US President Donald Trump added to the woes. This kept the global dollar pressurized against the majors which worked in favor of the Pound currency. Also, after months of rough rhetoric between Euro-zone and Britain both the nations announced that there would be a transition period following the UK's departure from the EU in March 2019 which boosted the market sentiments and kept the Sterling supportive. On Thursday, the Pound currency immediately surged post the release of BoE monetary policy statement where the committee left the interest rates on hold and hinted that a May increase was in the line. GBPUSD made a weekly high of 1.4216 levels. However, this strength in the shared currency was short-lived as recent gains in the currency prompted the traders to book profit prior to the US President's speech on trade tariffs later in the day. On the last trading day, the Pound currency once again surged higher on back of weak global dollar after the US President Donald Trump hit China with \$60 billion of trade tariffs. In a counter-move, China responded by hitting \$3 billion of US goods with sanctions. Not only this, the US President passed \$1.3 trillion spending bill and ended several hours of confusion that was raised by a tweeted veto threat of a government shutdown. The American currency suffered due to this, which worked in favor for the Sterling Pound. GBPUSD closed the week at 1.4132 levels.

Technical Outlook:

Week ahead: Cross has given a bearish close on the daily charts while has given bullish close on the weekly charts signaling a downmove initially towards 1.4000 levels. However, any support towards 1.4000 levels shall see the pair inching higher towards 1.4220 levels. Further resistance lies at 1.4360 levels. Only a convincing break and close above the same shall open the gateway for a swift upmove towards 1.4450 and 1.4550 levels. On the downside, further support lies at 1.3850 levels. Technical indicators are signalling the same bullish momentum.

Key Support: 1.4000, 1.3850, 1.3650

Key Resistance: 1.4220, 1.4350, 1.4550

Advise: Importers are advised to cover their short term payables on dips towards 1.4000 levels. Exporters are advised to cover their near term receivables on spikes towards 1.4350 levels.

For the week 26th Mar – 30th Mar 2018

Japanese Yen:

This week there were host of uncertain events in the global arena that boosted the demand for safe-haven Yen. USDJPY started off the week at 105.94 levels and depreciated a bit as lack of important economic datasets from the nation prompted the traders to focus on the on-going land scam that involved the Japanese Prime Minister, his wife and the Japanese Finance Minister. The weakness in Japanese Yen continued on the next day too on back of strong global dollar as markets were pretty much optimistic of a 25 basis point of rate hike in the upcoming FOMC Monetary Policy Statement that was to be released on Wednesday. However, things did not go fully as per the expectations. On Wednesday, in the initial trading session the Japanese currency made weekly low levels of 106.63 however this weakness could not withstand for long as markets discounted the release of FOMC Monetary Policy Statement which pulled the American currency down. The committee raised rates by 25 basis points as expected but forecasted only two more hikes for 2018 instead of three. Also, the on-off threats on trade tariffs by the US President Donald Trump added to the uncertainty. All of these factors boosted the demand for safe haven Yen. The strength in Yen continued on Thursday too when the US President commented on imposing \$50 billion of tariff on China's imports which forced the Chinese authorities to retaliate. In a counter-move, China responded by hitting \$3 billion of US goods with sanctions. Markets all over the world were engulfed in uncertainty which prompted the traders to refrain from making any risky bets which worked in favor of Japanese Yen. On the last trading day, the Japanese currency made a weekly high level of 104.62 after the US President Donald Trump passed \$1.3 trillion spending bill and ended several hours of confusion that was raised by a tweeted veto threat of a government shutdown which dented the demand for the American currency. USDJPY closed the week at 104.72 levels.

Technical Outlook:

Week ahead: The pair has given bearish close on the daily and weekly chart below its key support of 105.00 levels signalling a downmove towards 104.30 levels. Only a convincing break and close below the same shall open up the gateway for a swift downmove towards 103.50 levels. Further support lies at 102.60 levels. On the upside key resistance lies at 105.30 and 106.50 levels. Further resistance lies at 107.30 levels. Technical indicators are signalling a bearish momentum.

Key Support: 104.30, 103.50, 102.60

Key Resistance: 105.30, 106.50, 107.30

Advise: Exporters are advised to sell their near term receivables in a staggered manner on dips towards 103.60 levels. Importers are advised to cover their near term payables on spikes towards 105.20 levels.

Trump moves towards China tariffs in warning shot on technology transfer

U.S. President Donald Trump lit a slow-burning fuse on Thursday to launch long-promised anti-China tariffs, but his actions appeared to be more of a warning shot than the start of a full-blown trade war with Beijing.

A presidential memorandum signed by Trump will target up to \$60 billion in Chinese goods with tariffs over what his administration says is misappropriation of U.S. intellectual property, but only after a 30-day consultation period that starts once a list is published.

Trump gave the Treasury Department 60 days to develop investment restrictions aimed at preventing Chinese-controlled companies and funds from acquiring U.S. firms with sensitive technologies.

The waiting periods will give industry lobbyists and U.S. lawmakers a chance to water down a proposed target list that runs to 1,300 products, many in technology sectors.

It also will create space for potential negotiations for Beijing to address Trump's allegations on intellectual property and delay the start of immediate retaliation against U.S. products from aircraft to soybeans.

"I view them as a friend" Trump said of the Chinese as he started his announcement. "We have spoken to China and we are in the middle of negotiations."

'FIGHT TO THE END'

But his actions provoked a belligerent response from China's embassy in Washington, which vowed Beijing would "fight to the end" in any trade war with the United States.

"We will retaliate. If people want to play tough, we will play tough with them and see who will last longer," Chinese ambassador Cui Tiankai said in a video posted to the embassy's Facebook page.

Stocks fell sharply on Trump's announcement, with the Dow Jones Industrial Average. DJI falling nearly 3 percent. Major industrials that could become targets of Chinese trade retaliation slumped further, with aircraft maker Boeing (BA) down 5.2 percent and earthmoving equipment maker Caterpillar (CAT) falling 5.7 percent.

In addition to punitive tariffs, Trump's memo also directed U.S. Trade Representative Robert Lighthizer to challenge China's technology licensing programs at the World Trade Organization. The WTO has repeatedly drawn the ire of the administration, but it could provide a resolution that avoids a trade war.

The steps are based on the results of USTR's eight-month investigation of suspected misappropriation of American technology by China.

U.S. officials say that probe, undertaken through Section 301 of the 1974 Trade Act, has found that China engages in unfair trade practices by forcing American investors to turn over key technologies to Chinese firms.

Trump, who earlier this month announced steep tariffs on steel and aluminium imports to the United States, also wants the Chinese to take action that would lower the \$375 billion goods trade deficit that the United States is running with China.

White House officials told a briefing ahead of the trade announcement that the administration was eyeing tariffs on \$50 billion in Chinese goods. They said the figure was based on a calculation of the impact on the profits of U.S. companies that had been forced to hand over intellectual property as the price of doing business in China.

There was no explanation of the difference between that figure and Trump's \$60 billion.

"Many of these areas are those where China has sought to acquire advantage through the unfair acquisition and forced technology transfer from U.S. companies," said Everett Eissenstat, deputy director of the National Economic Council.

In addition, Trump will also direct the U.S. Treasury to propose measures that could restrict Chinese investments in the United States, Eissenstat said.

China has threatened to target U.S. exports of agricultural commodities, in particular the \$14 billion in exports of soybeans.

Reaction from U.S. industry groups sought to strike a balance, applauding the president for tackling the persistent drain of U.S. technology to Chinese competitors, but urging negotiations instead of tariffs.

"American business wants to see solutions to these problems, not just sanctions such as unilateral tariffs that may do more harm than good," said John Frisbie, president of the US-China Business Council.

Despite threats of retaliation, China has been keen to portray itself as a defender of globalization, a message that was reinforced in a call between President Xi Jinping and French President Emmanuel Macron.

That said, there is a risk of a mounting cycle of retaliation. U.S. Trade Representative Lighthizer warned on Wednesday that Washington would take "counter measures" if Beijing targeted U.S. agriculture.

The biggest risk to world trade over the longer term may not be a tit-for-tat trade war, but the breakdown of global supply chains that feed companies such as U.S. auto giant General Motors Co (GMN) and Apple Inc (AAPLO).

“Tensions are likely to escalate further, even without a full-scale trade war. This could disrupt global supply chains and damage investor sentiment,” said Dario Perkins, head of global macroeconomics research at TS Lombard, a London-based economic consultancy.

Trump’s steel and aluminium tariffs, which are tied to Section 232 of the 1962 Trade Expansion Act, go into effect on Friday. Canada and Mexico have been given initial exemptions from the 25 percent steel and 10 percent aluminium tariffs.
