# About Toshiba

2.1.2 Jointly examine and develop ways in which to improve cooperation and consultation between DOs and Customs administrations at the national level, with a view to combating illicit trade through the postal supply chain and improving mail security, and in which to assist one another in the detection of dangerous goods and other prohibited materials, while abiding by the fundamental principles of the international postal service, in particular, freedom of transit, as set out in article 1 of the UPU Constitution;

2.1.5 Assist DOs and Customs administrations in the digitalization of their working processes to facilitate a more efficient and effective collaboration;

2.1.6 Enable DOs and Customs administrations to capture, send, receive and use electronic data in accordance with applicable data privacy and protection laws, and establish appropriate measures to improve data quality and the timely submission of data (pre-loading and pre-arrival);

2.1.8 Develop and implement capacity-building initiatives for DOs and Customs administrations in areas of common interest, including digitalization to enable process automation and paperless treatment of postal items, the use of available data to identify risks/threats, and improvement of compliance with Customs and other regulatory requirements;

## Letter Sorting Machine “TT-210”

# Toshiba “TT-210” Letter Sorting Machine

## Features : Compact and Low Energy Consumption

### 1. Almost 60 years business experience since 1965

- In 1968, started the automation of outward sorting.
- In 1989, started the automation of inward sorting in.
- In 1998, started the automation of carrier sequence sorting.

### 2. Delivery Record : over 2,000 units delivered

- Currently, in Japan, over 1,000 “TT-210”s are in operation.

### 3. Specifications

- Letter Size: Up to C5.
- Speed: Max. 50,000 letters/hour (BCR mode)
- Outputs: Max. 450 stackers (8-bin type)
- Footprint: L 20m x W 1.8m x H 2.2m (450 stacker model)
- Power consumption: 32kVA
- Can read post codes, addresses, apartment names, recipient names to improve efficiency of sequence sorting.

## Line recognition and extraction to DB matching

Light blue shows database and recognition result of characters after database matching.

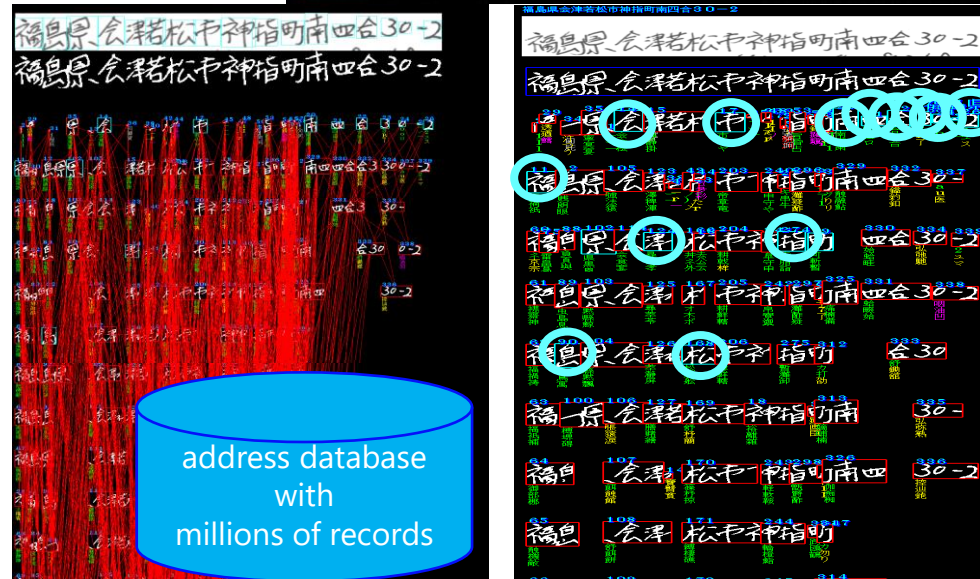

Enabling recognition below address correctly

"Blk 122C"  
"Sengkang East Way"

Change shape of characters in 3D

Result of line recognition

# Toshiba's OCR for Customs operation

The OCR system is able to recognize multiple information on the Customs declaration forms and labels affixed to packages, and automatically collate those with pre-registered information, and alert Customs officers and inspectors if needed .

1. Automatic recognition of information on Customs forms or labels
2. Automatic recognition of specific items or key words on Customs forms

Inspector decides "Caution is needed"

# Overview of Centralized Screening process for Postal Packets

1. Place roller cage with packets, then pick and scan the barcode of the packet to check the preliminary registered information. In case of discrepancies (i.e. weight, etc.) correct in system.

2. Place packet with barcode on top (or front) side. The registered information is transferred to a security department at the same time.

3. Barcode is read by barcode scanner;  
• Packets approved by the security department goes to X-Ray screening.  
• All other items are rejected and sent to a manual operation area.

4. X-Ray

5. X-Ray images and registered information are sent to Customs officer room, and displayed on monitors, which then the Customs officer selects OK or NG).

Customs Officer's Room

6. If Customs officer decision is;  
• "NG" then packet goes to a manual inspection area.  
• "OK" then packet goes to sorter area.

# Overview of Screening process for Postal Packets

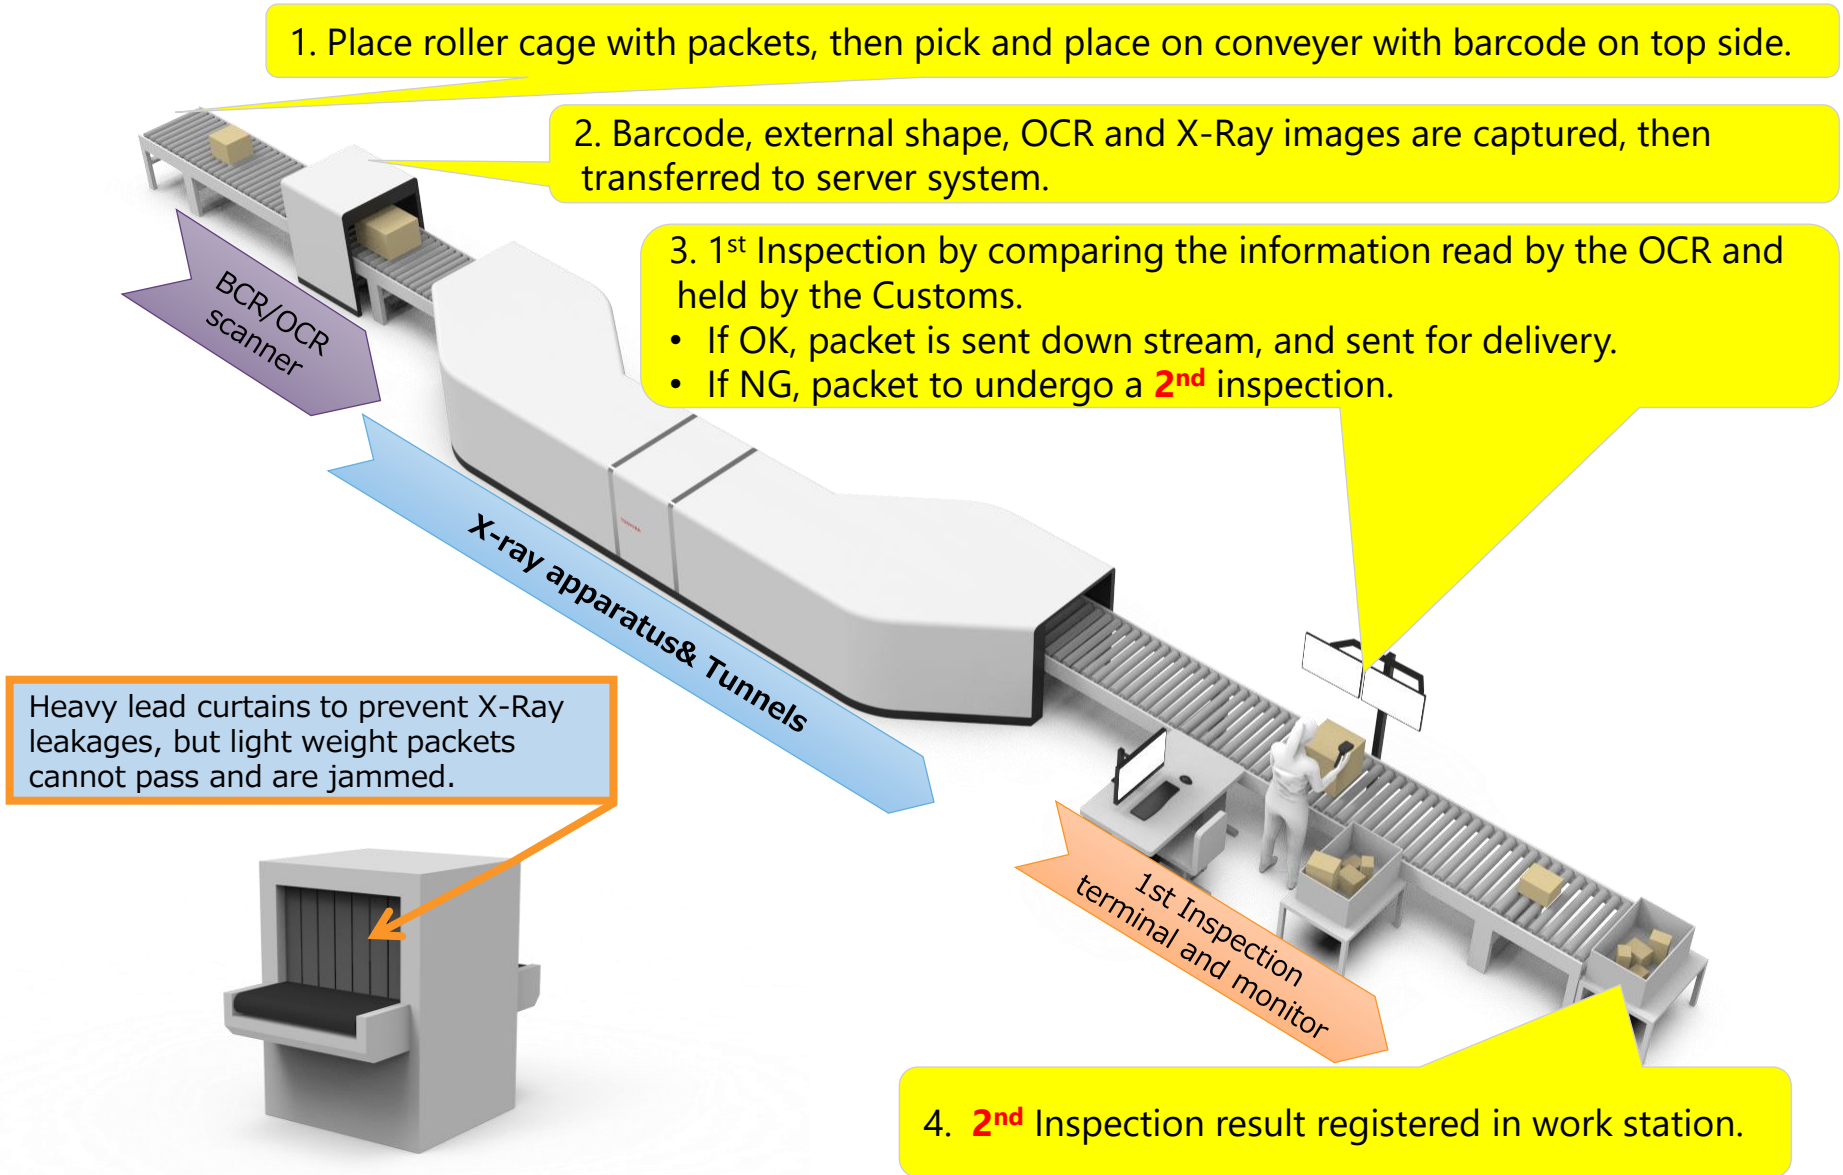

1. Place roller cage with packets, then pick and place on conveyer with barcode on top side.

2. Barcode, external shape, OCR and X-Ray images are captured, then transferred to server system.

3. 1<sup>st</sup> Inspection by comparing the information read by the OCR and held by the Customs.

- If OK, packet is sent down stream, and sent for delivery.
- If NG, packet to undergo a 2<sup>nd</sup> inspection.

4. 2<sup>nd</sup> Inspection result registered in work station.

# Customs Inspection Workstation Set-up

Integration of sub-system provides not only X-ray images, but also registration result and external picture on the screens for remote assessment.

Screens available in both Touch or Non-Touch Screens!

OCR information  
(comparing information read by OCR and held by Customs)  
Barcode information  
External images are displayed.

Operator can chose the Result of inspection (i.e. "OK", "NG")  
(destination chute)

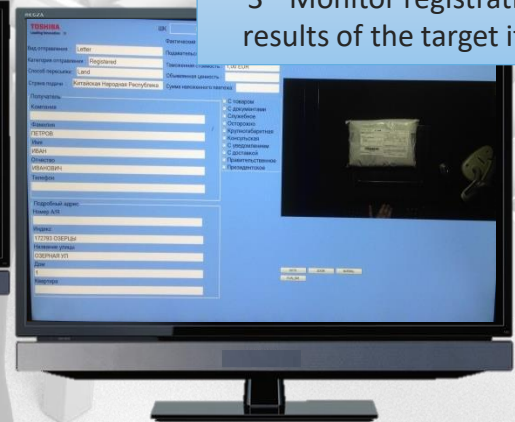

1<sup>st</sup> Monitor X-ray image

2<sup>nd</sup> Monitor X-ray image (alternative surface)

3<sup>rd</sup> Monitor registration results of the target item

- Operation keyboard →
- Zoom-in, Zoom-out
- Decision button

# Features of Toshiba's Customs System

- 1. Accurate AI-OCR technology**
- 2. Curtain-free No-Jam X-Ray System**
- 3. Tailor-made conveyor and operator screen layouts**

# Our Vision for the future of Customs & Posts

## Harmonized Customs Inspection & Postal Sorting Process

Ensure safety and security of society and well-being of the public

**Committed to People,  
Committed to the Future.**
