

# Open Source & Blockchain Technology

## A path towards increased Integrity and Trust in Supply Chains and Customs?

---

WCO Technology Conference & Exhibition 2023 – Session B3: Technology in Support of Integrity in Customs  
October 11<sup>th</sup> 2023 – Hanoi, Vietnam

Roman Koller, M.Sc.

Fraunhofer Institute for Material Flow and Logistics IML – Dortmund, Germany

## Fraunhofer-Gesellschaft

> 30.000  
employees

76 institutes  
and research institutions

2.9 billion  
research volume

Main locations  
Branches

## Fraunhofer IML, Dortmund

> 400  
employees

> 300  
graduate students and  
student assistants

> 50 million  
turnover, 30% of which is made  
with industrial partners

Innovations from the concept  
up to market maturity

# WHY WE DO WHAT WE DO

# Why Blockchain?

## Challenges and Potentials in SCM & Logistics and Customs

### Challenges

Different parties  
lack of confidence

Duty of  
documentation

Guarantees  
of origin

Manual,  
paper-based  
processes

Verifiable  
authentication

Heterogeneous  
IT system landscape

### Potentials

Administrable data  
access  
Secure data exchange

Transparency  
across the  
entire supply chain

Seamless  
traceability

Process automation  
through state-oriented  
data processing (Smart  
Contracts)

Verification through  
manipulation-proof,  
digital identity

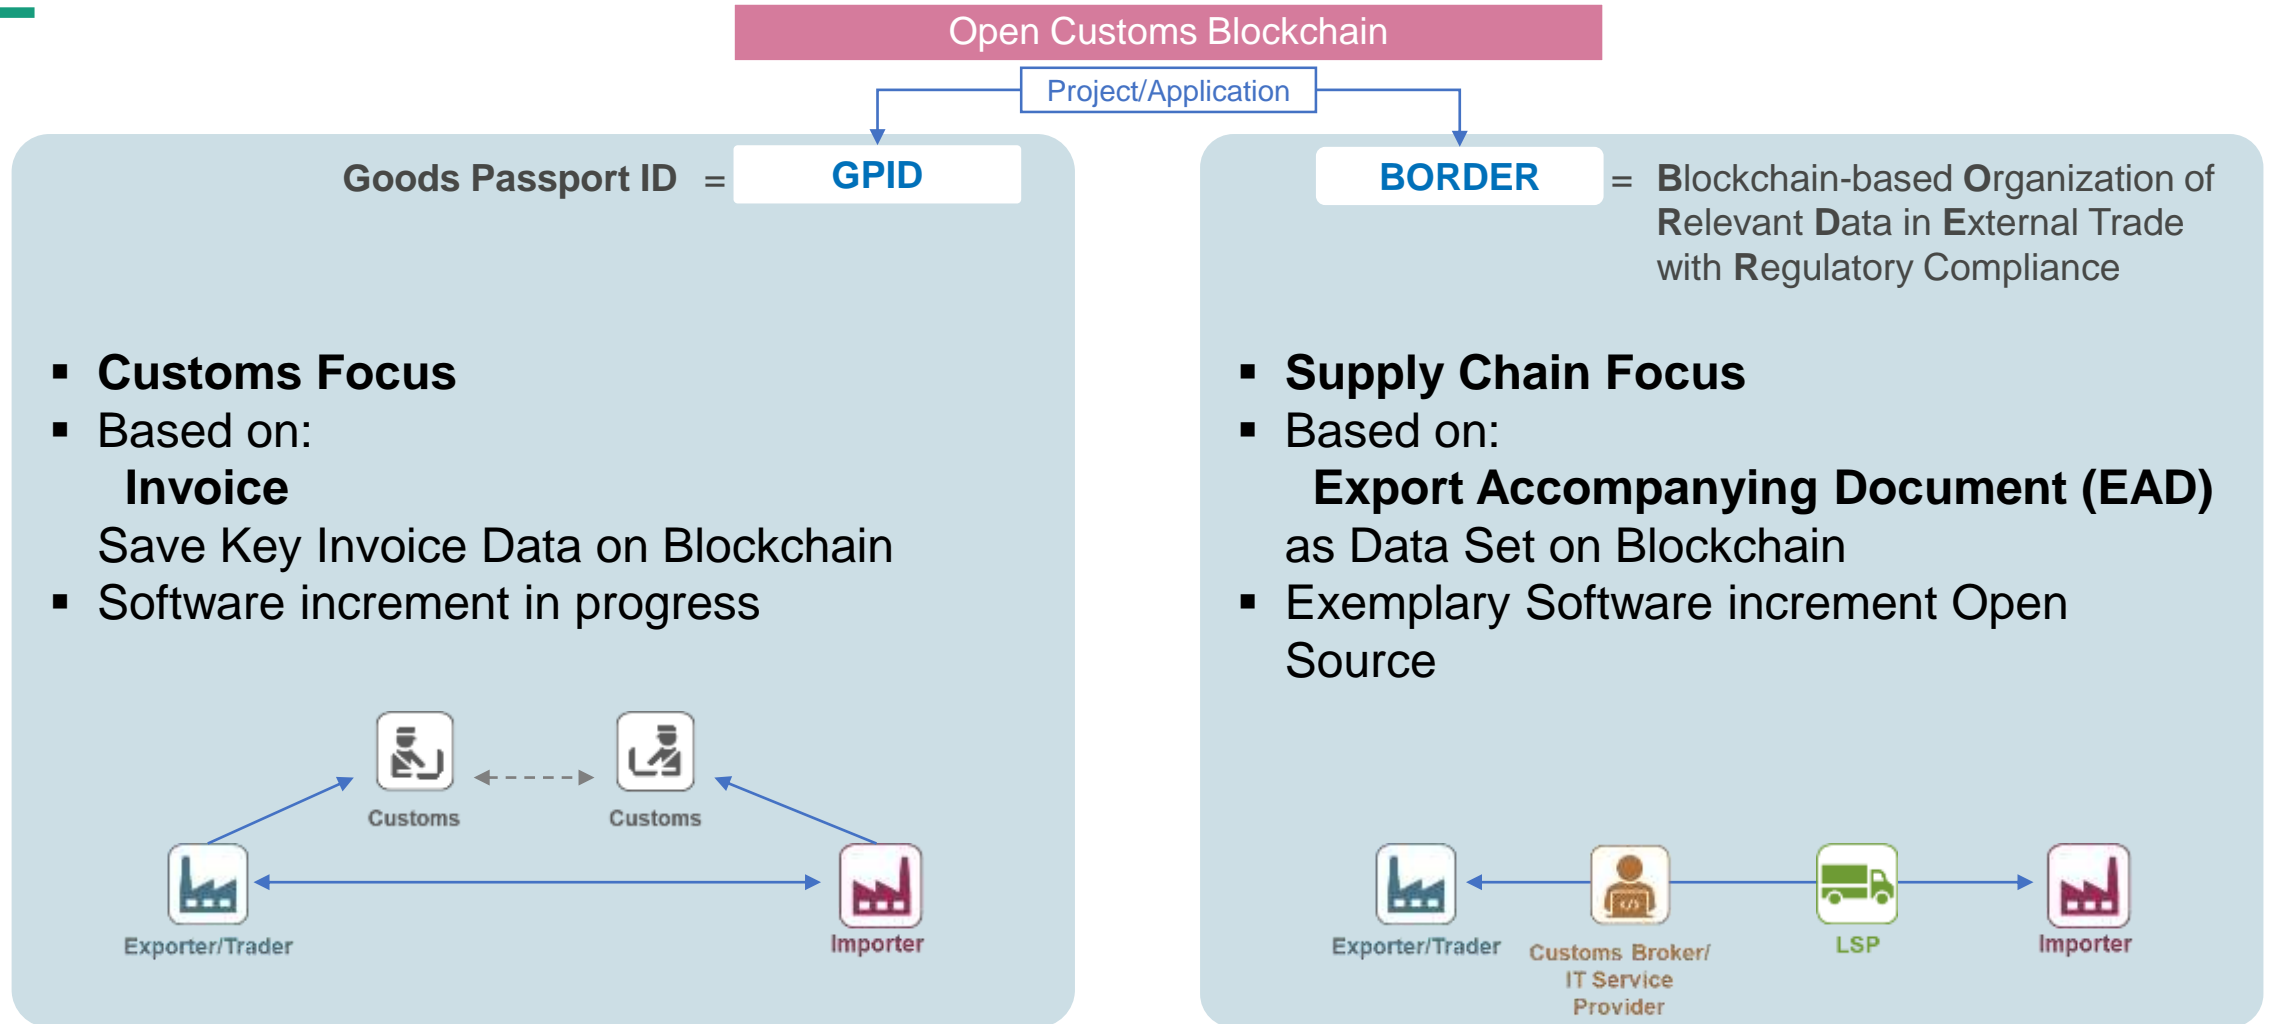

Interoperability  
of the blockchain

# WHAT WE DO

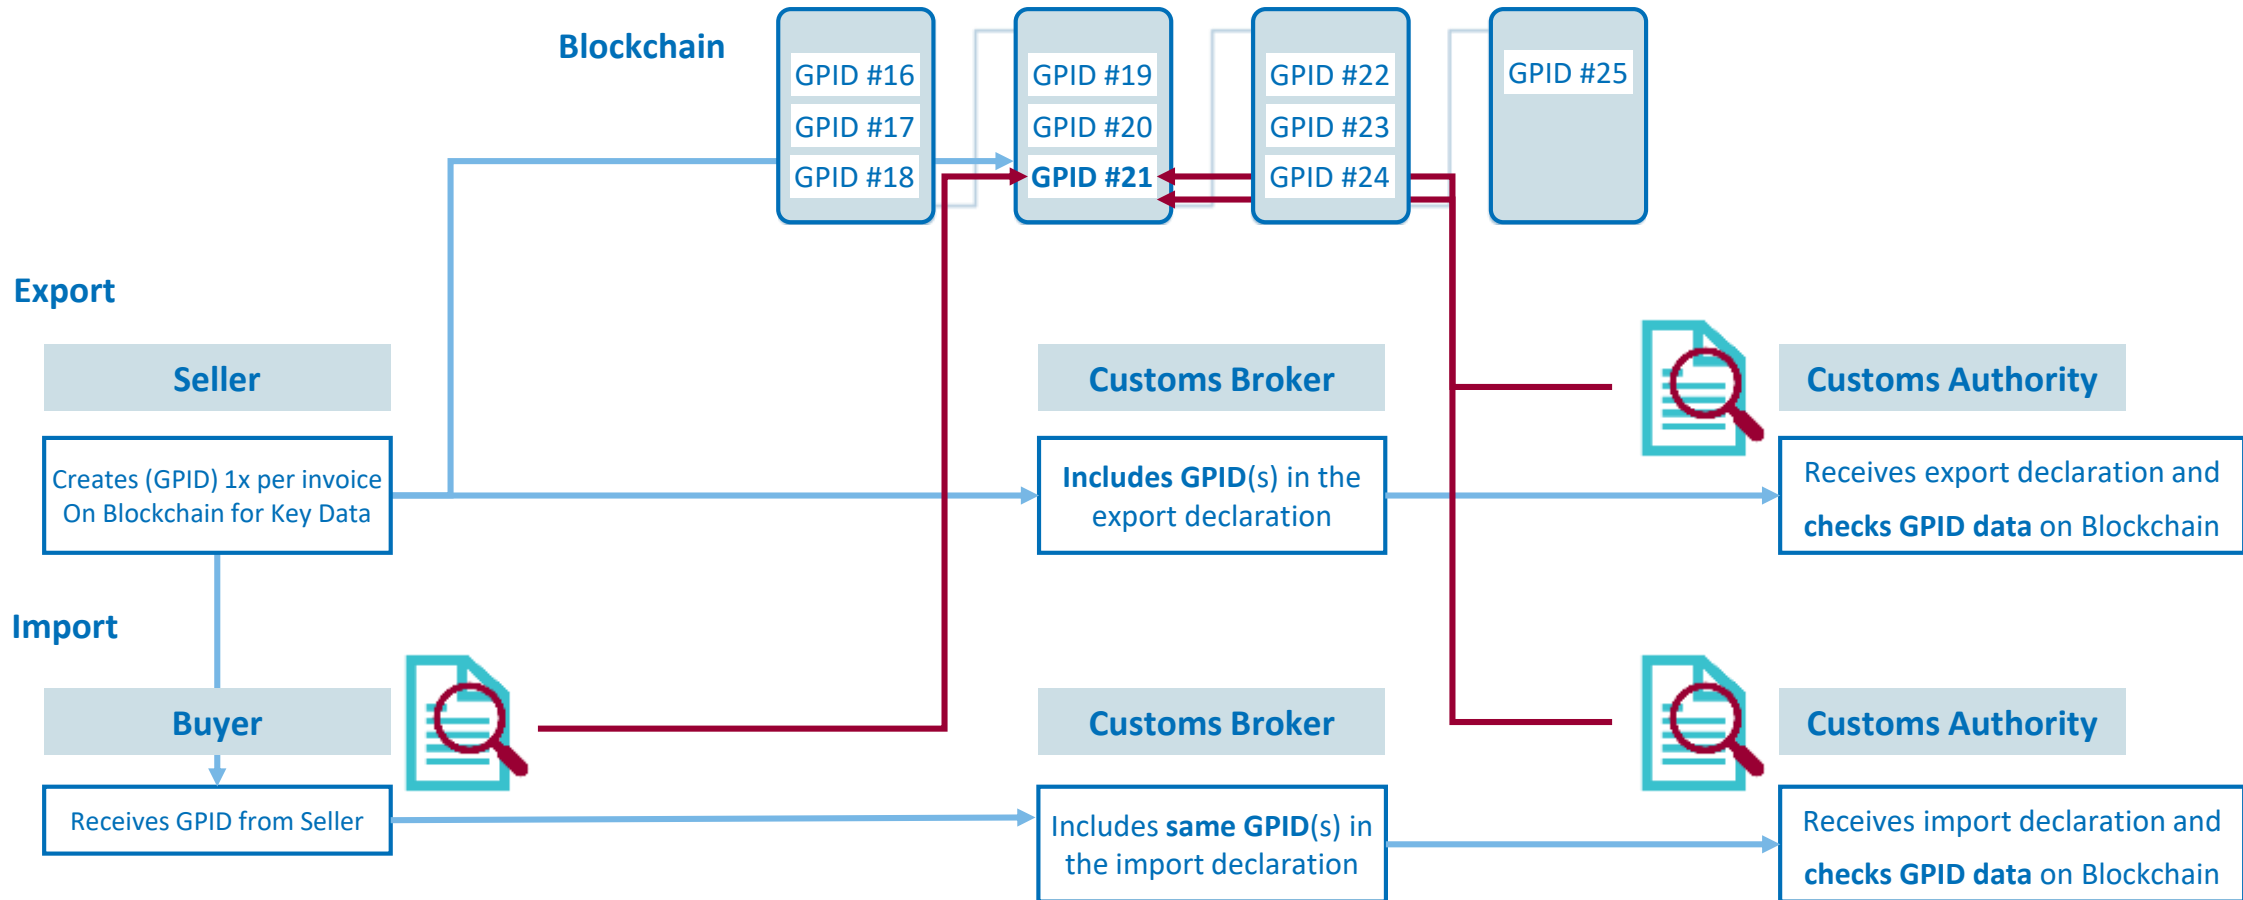

# Open Customs Blockchain

## Structure of Applications

# Goods Passport ID

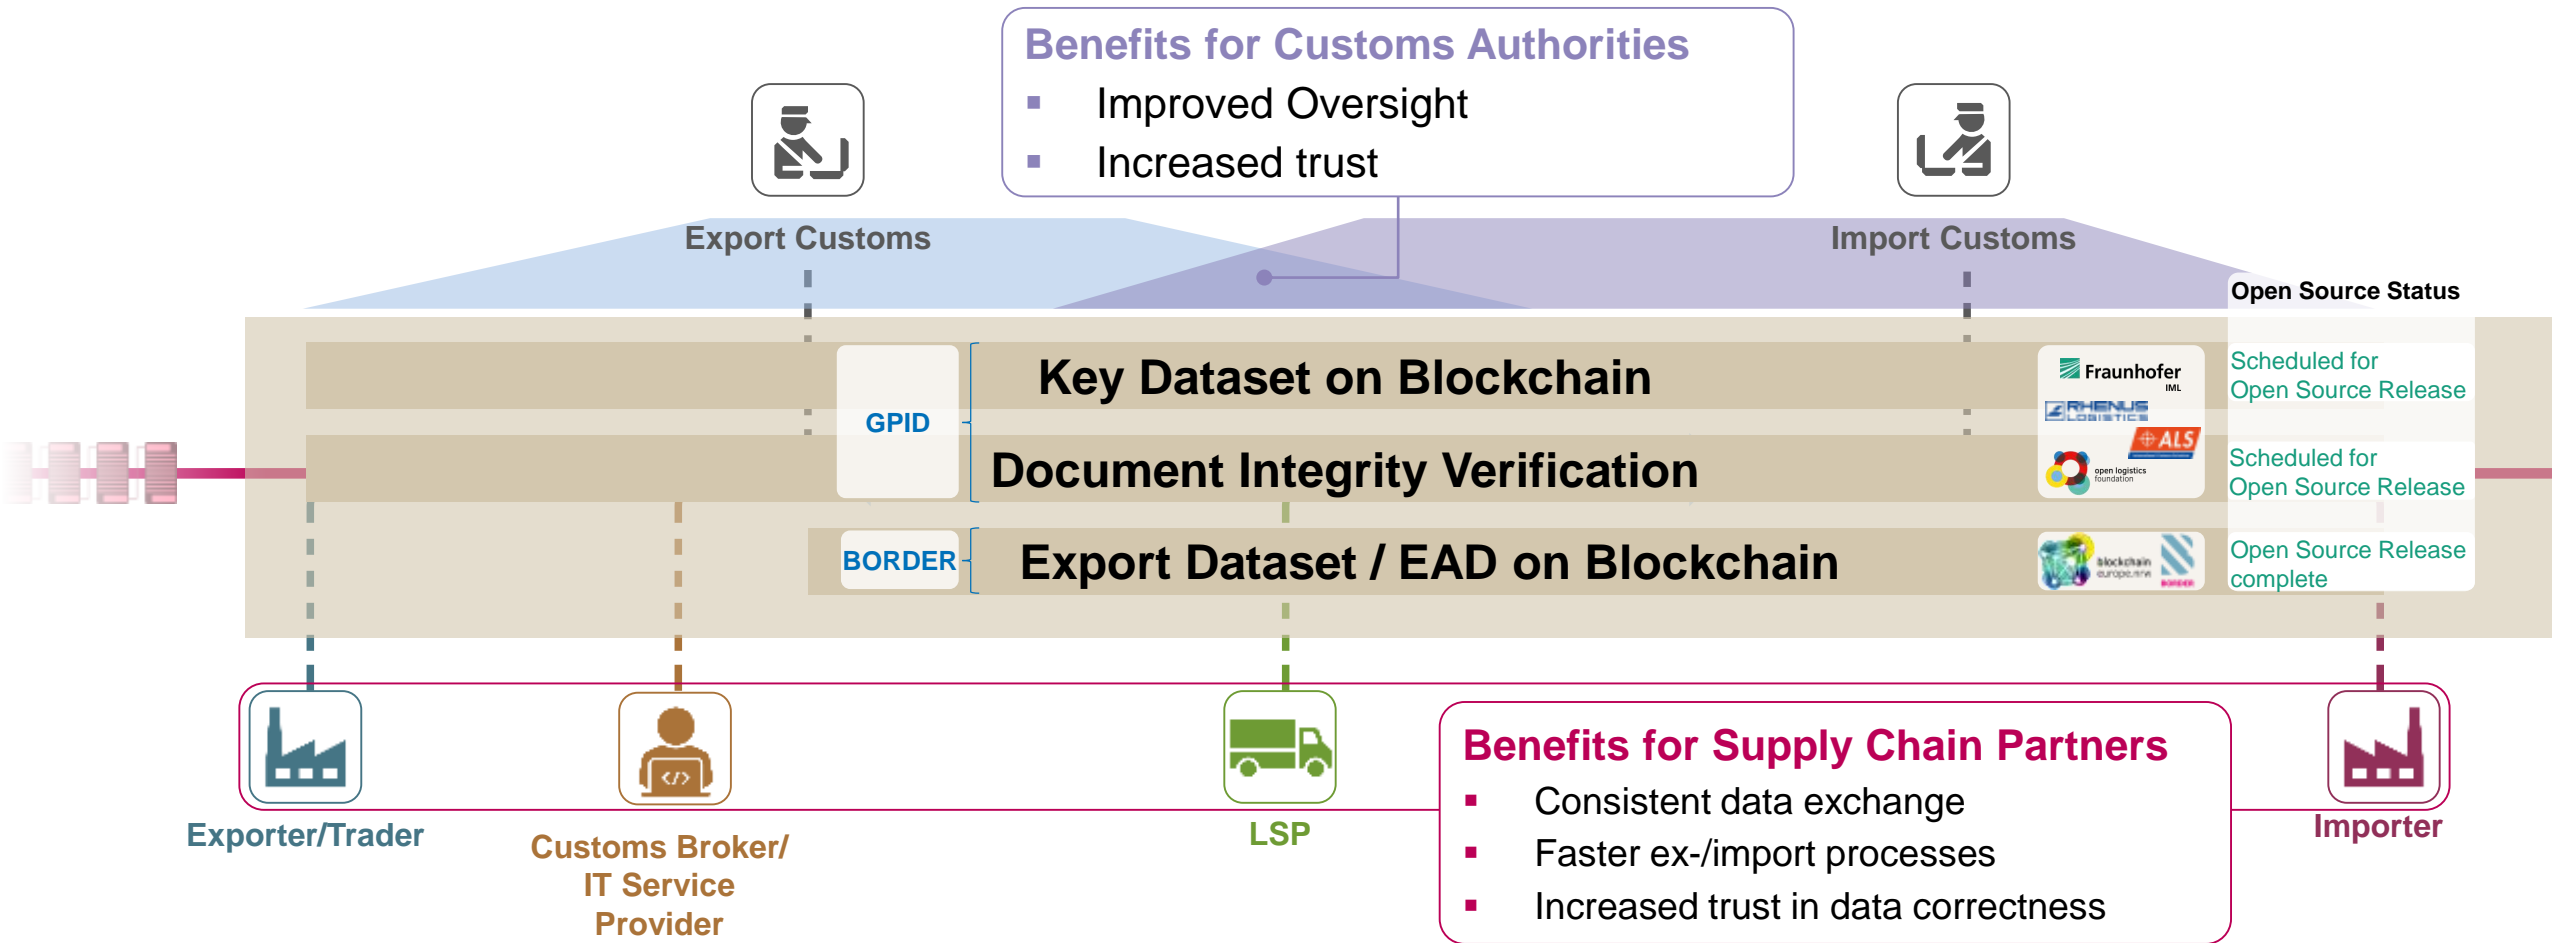

## How it works

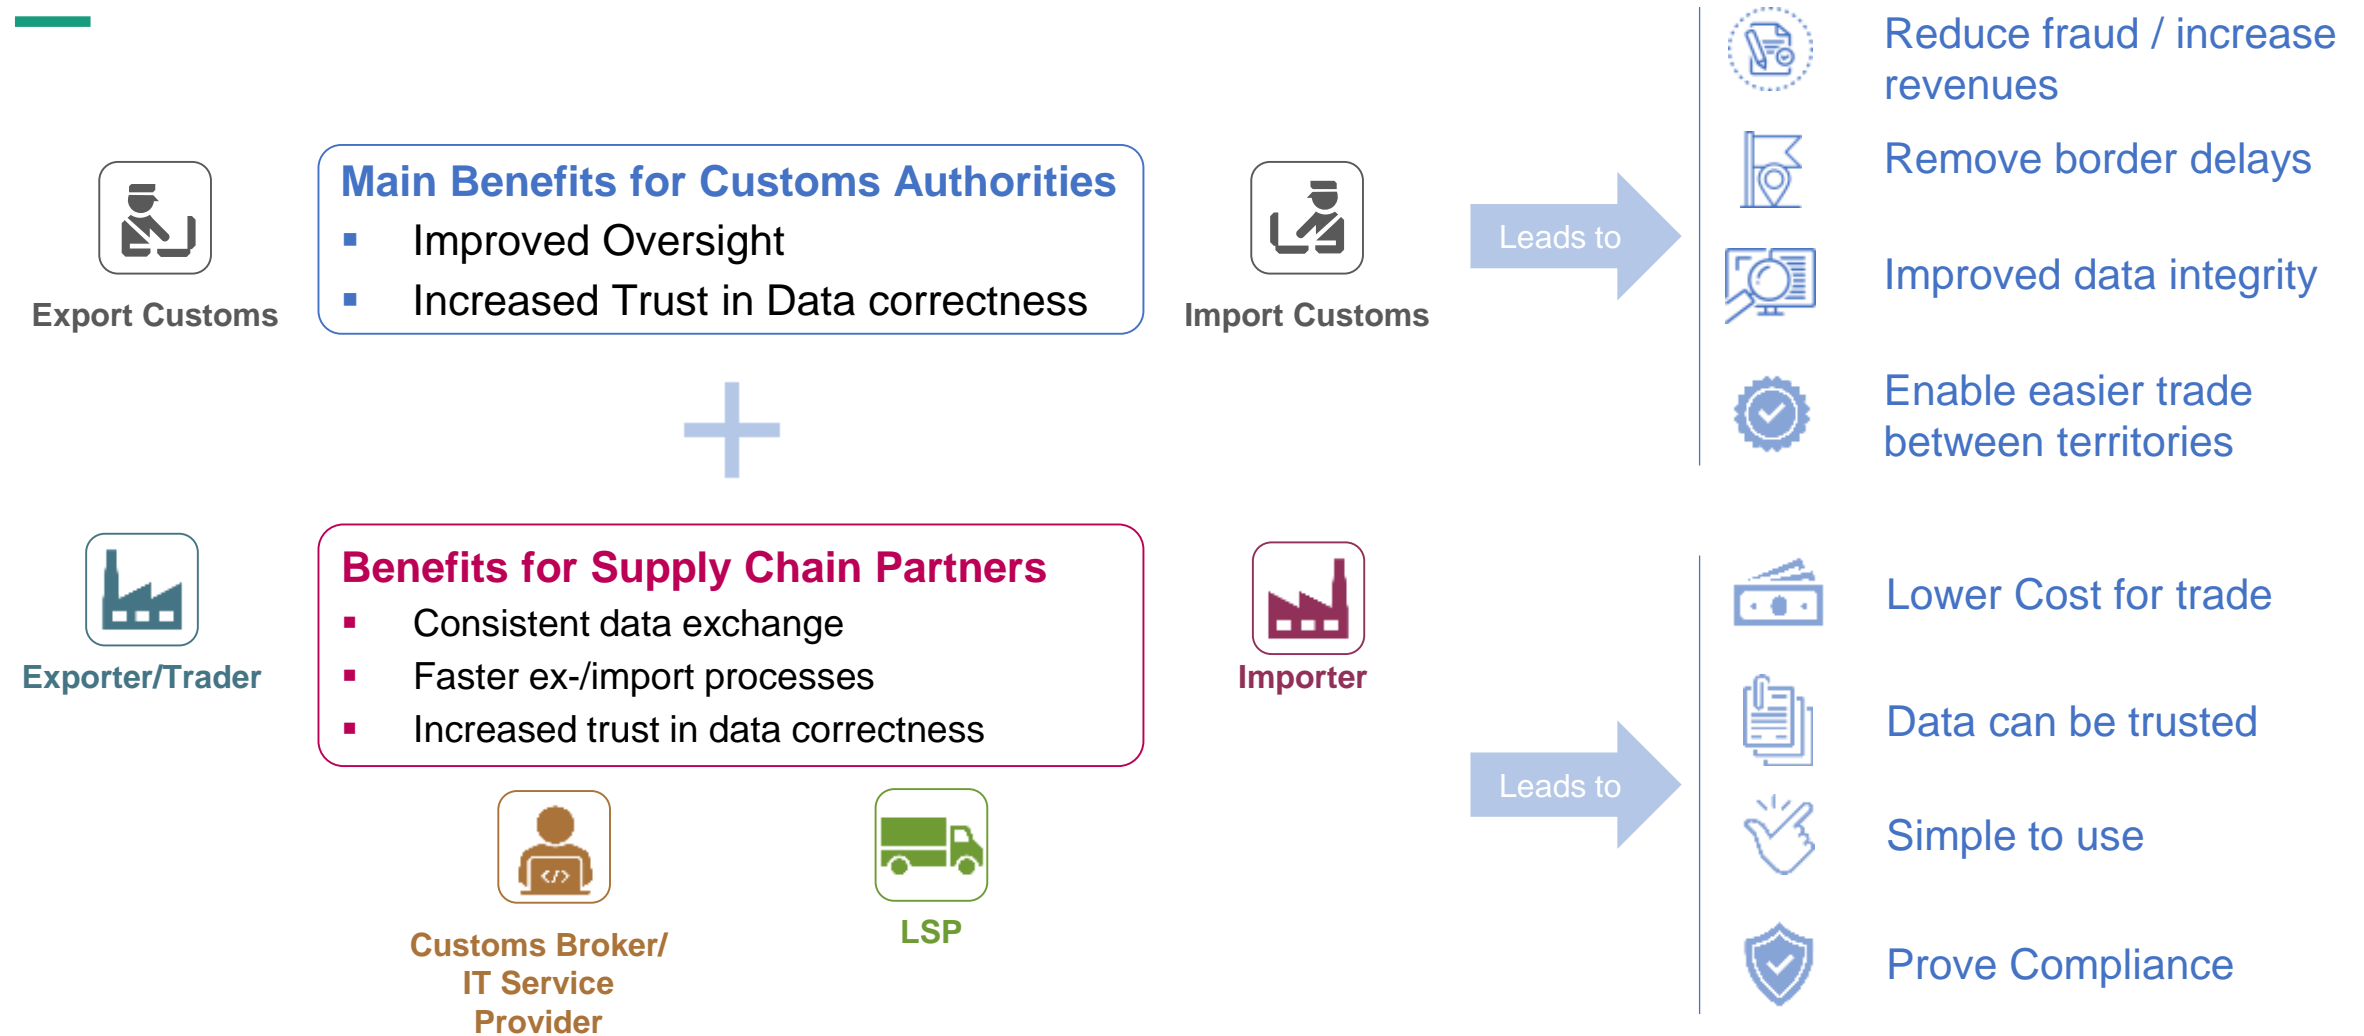

# Blockchain & Customs – What does this lead to?

## Functionalities and Benefits

# What are the benefits?

# HOW WE DO IT

**“Coopetition!**

**Open-source over classic collaboration.**

**Digitalization can't be achieved in isolation.”**

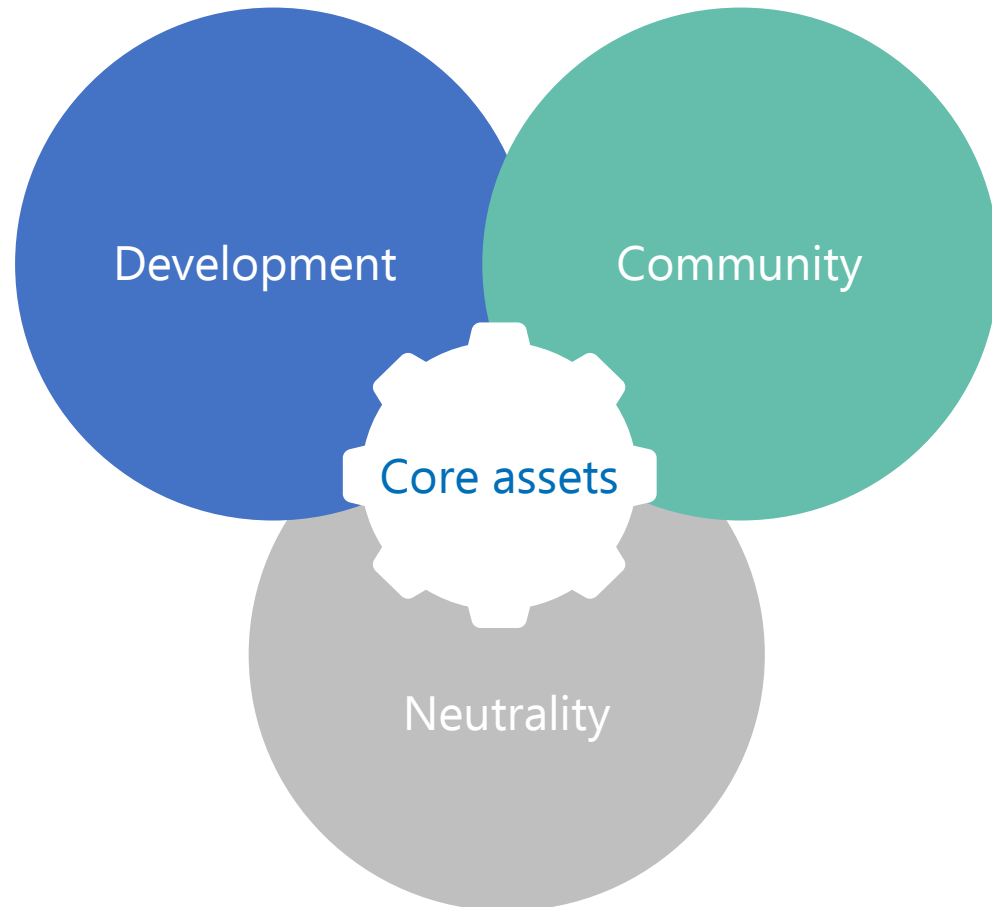

Stefan Hohm, CDO at Dachser SE

open logistics  
foundation

# Open Logistics Foundation

A neutral ground for Open Source Development

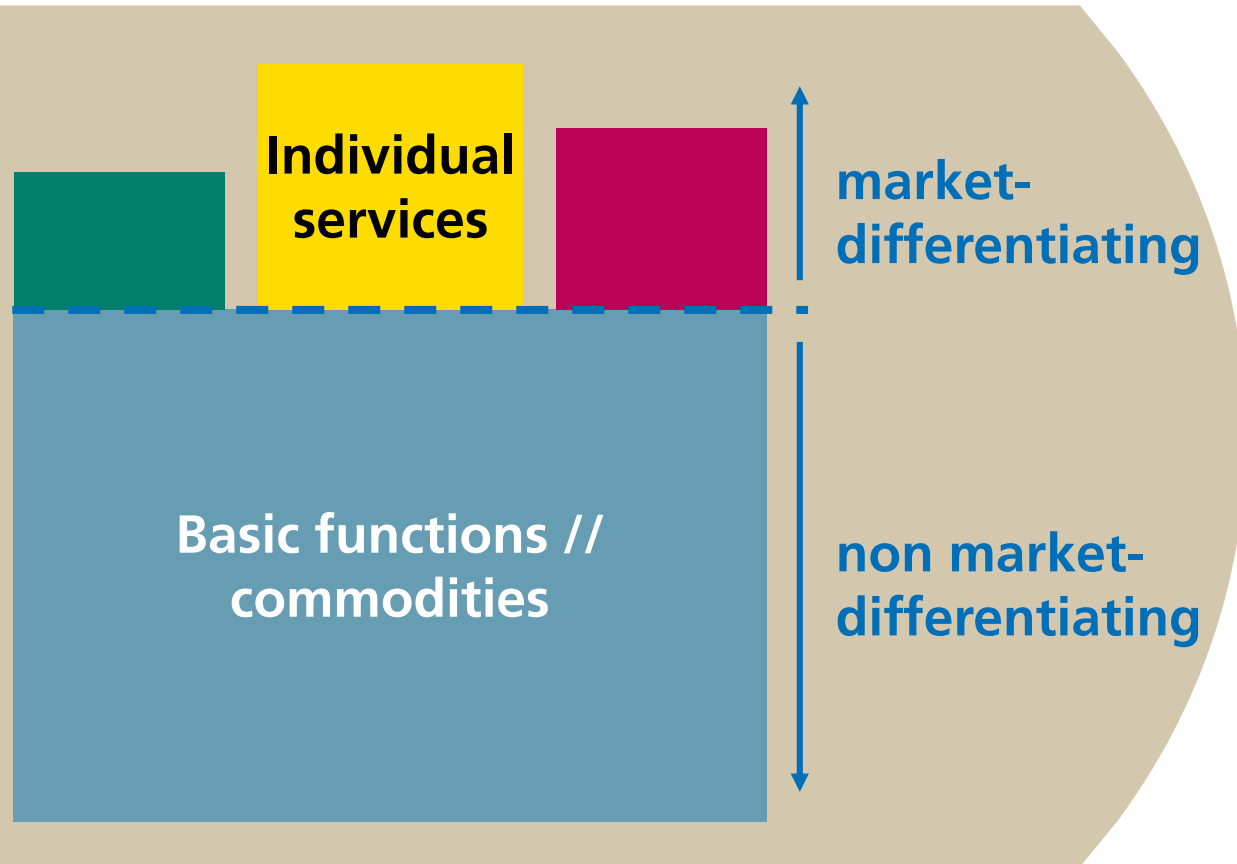

Joint development of open source solutions and projects.

A diverse and active community working together to establish and maintain open source solutions.

A neutral ground where all parties can freely contribute and access open source software publications.

*Learn more: <https://openlogisticsfoundation.org/>*

# Building Commodities Together

## Many developments serve basic or commodity services

- Many developments and innovations currently serve basic functions and commodity services that provide no option to monetise.
- Commodities are non market-differentiating services or basic features that companies offer to their clients.

Development of **commodities collaboratively**.  
Focus on **market-differentiating** services **individually**.

# The path to practical application

Open Logistics Foundation – Open Customs Blockchain

**Goal: Better integration and interconnection of digital customs procedures and data exchange**

## Open Customs Blockchain

- BORDER** – Export Data on Blockchain based on EAD
- GPID** – Simple dataset to speed up cross-border data exchange

» **Open Source Blockchain Components as a key to practical application**

## Working Group: Open Customs Blockchain

# How can Customs Authorities participate?

## Customs Authorities are invited to join as:

- **Critical Reviewers** of concept, projects and technical status quo
- **Guides** on future technical developments
- **Supervising members** of a practical test / PoC

## Required efforts by Customs Authorities for Proof of Concept:

- **2-3 hours per month** for consultation & meetings
- **PoC duration** (including consultation/planning) can be **3 to 6 months** by agreement
- **Monitor a real-world shipment** through a **test / Proof of Concept process, track & verify data**
- **Project is open source and free of charge**

**No monetary investment required**

Design and scope to be determined together with the authority
