

Clinical Outcomes of FSGS with Nephrotic Syndrome at 1-Year: Findings from the ITANGIBLE Registry (WCN25-AB-4408)

Kavita Yadav, Arun Prabhakar, Anshuman Shekhar, Raja Ramachandran, Vivekanand Jha

Method and cohort

To study FSGS outcomes at 1 yr

Multi-Centre study (13)

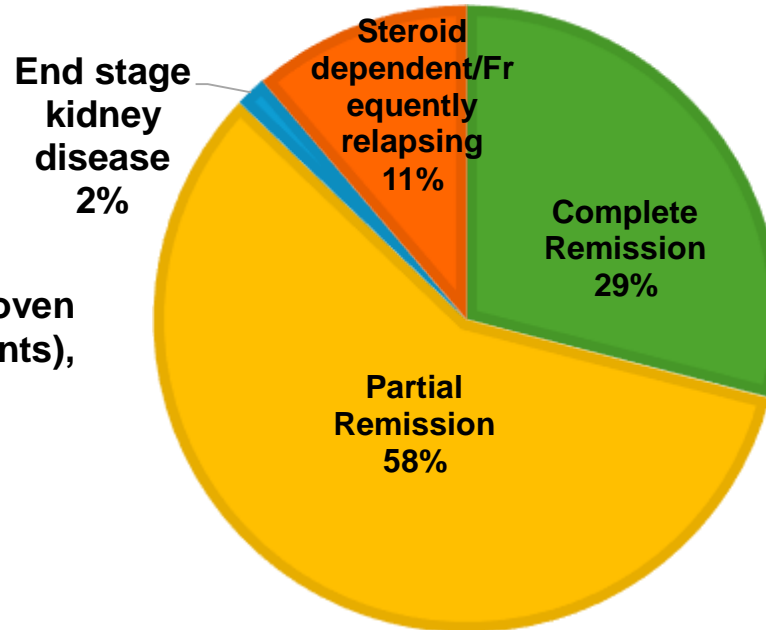

Adult patients with biopsy-proven diagnosis of FSGS (67 patients), June 2022 to June 2024

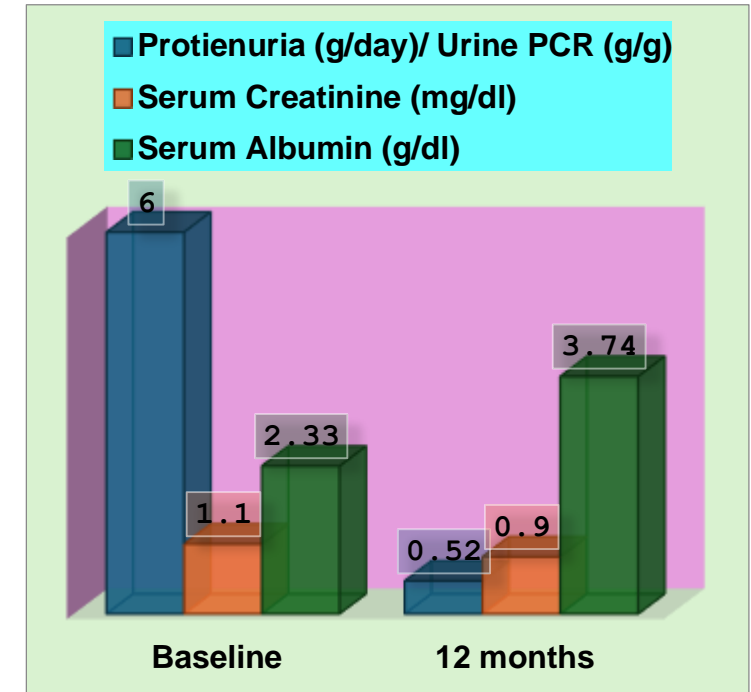

34 (50.74%)

09 (13.43%)

Findings

Conclusion: This is the first study documenting the natural course and short-term outcomes of adult patients with FSGS and nephrotic syndrome in India. Over 80% of patients with FSGS and nephrotic syndrome achieved clinical remission after treatment with RAAS inhibitors and steroids. Continued follow-up of the subjects will provide valuable data on long-term outcomes.
