1 Background

2 Application Scenario

3 Solution

4 Cases

1-Background

At present, the customs clearance process between many countries is very cumbersome, and some take up to several months, which not only increases the supervision cost but also increases the consumption cost of the end user.

Through the establishment of a monitoring system on the way, the use of safe smart locks is linked to the customs transportation system, the customs system and the customs manifest and other systems.

Collect and integrate key factor information such as the license plate number of the container vehicle, the container number, the ID number of the security smart lock, the time of entering and exiting the bayonet, the document information, etc., through the strict data comparison and verification of the document flow, the information flow and the cargo flow.

The integrated and coordinated supervision of customs construction and rolling vehicles in logistics transportation realizes the linkage and sharing of data on the checkpoints and supervision sites in the transit logistics chain, and implements electronic sealing, electronic unsealing, and unilateral inspection of the place of departure or arrival. A visualized, automated, and intelligent transit supervision mode for real-time monitoring of nuclear and transit transportation throughout the entire process.

Customs supervision is carried out by the following methods:

Customs sealing

Direct supervision by customs officers.

Using technical equipment and facilities

1-1 Pain in transit monitoring

Truck gets lost

Truck get lost in transit within Territory, can't find the location

01

Illegally increasing goods

cargo is illegally loaded without notification during transit.

02

Cargo stolen

Transit within territory, cargo get stolen without notification

06

Illegal cargo discharge

In transit, cargo is illegally discharged in territory

03

Goods smuggling

Paperless customs clearance, smart lock recycling

05

Delay on arrive destination

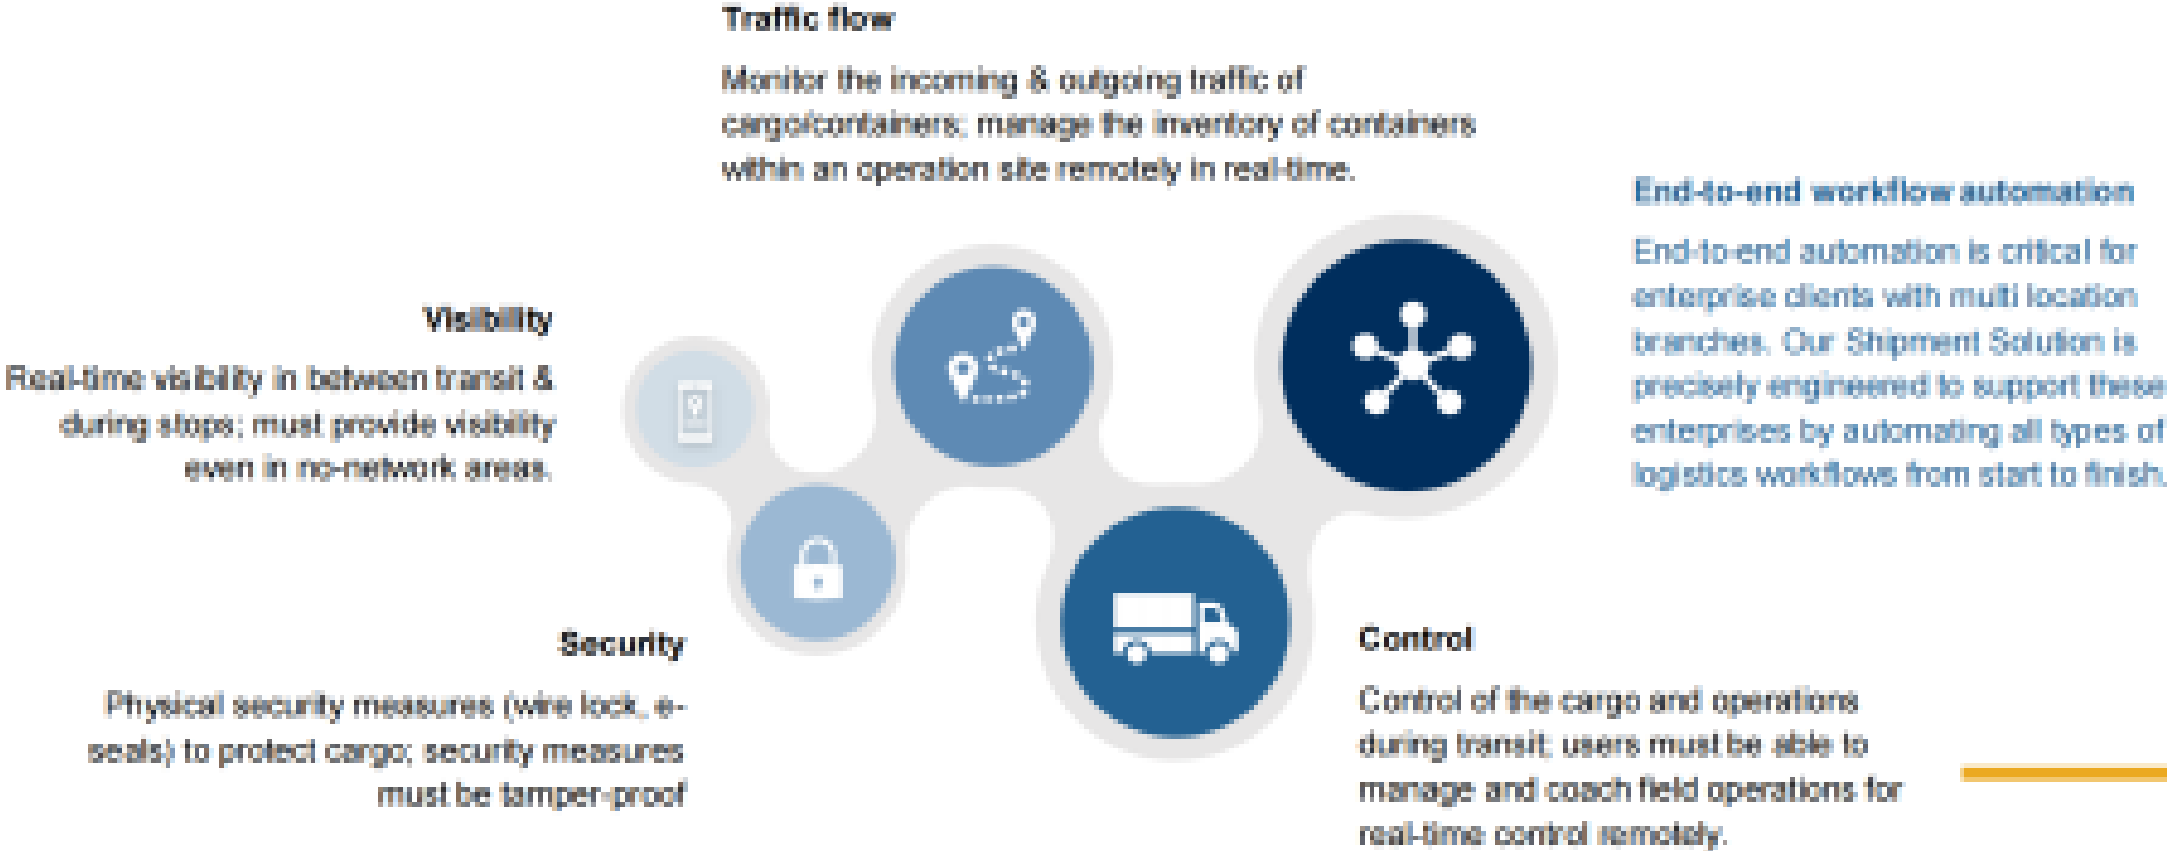

Delay on arriving destination, without notification

04

1-2 Challenges in transit monitoring

Shipment security has emerged as a trending topic during the pandemic, bringing numerous challenges for logistics operators worldwide. Stakeholders involved in operating shipment & logistics businesses have the following difficulties when facing shipment security:

2-1 Application Scenario-1

Out-of-port LCL: The bulk cargo will be shipped to the port terminal after the LCL is completed in the customs-supervised warehouse under the supervision of the customs.

Benefits of in-transit supervision: After the consolidation is completed, the terminal is released directly, reducing the workload of the customs secondary inspection and improving the efficiency of customs clearance

2-2 Application Scenario-2

International turnover container transfer terminal: Some container cargo needs to be transferred from one port to another port for transshipment.

It may be transported by ship or automobile, and is generally carried by logistics companies in the port.

Benefits of in-transit supervision: reduce customs inspections and improve the transportation efficiency of logistics enterprises.

Port 1

Port2

2-3 Application Scenario-3

Dangerous goods or special goods inspection outside the port: Some imported dangerous goods or special goods cannot be inspected at the port and docks, and they need to be transported to a specific place under customs supervision for inspection and released.

Benefits of in-transit supervision: prevent smuggling and reduce customs workload.

Port

Customs inspection place for special items

2-4 Application Scenario-4

Transit within the country: container enter the country from customs 1, and exit the country through customs 2. GPS electronic lock will be sealed during transportation. And it will be unsealed after container exit another customs.

Benefits of in-transit supervision: reduce customs clearance procedures, improve customs clearance efficiency, and improve transportation efficiency of logistics enterprises.

Customs 1

Customs 2

2-5 Application Scenario-5

Customs zone to free trade zone, bonded zone: materials imported to free trade zone and bonded zone which belong to customs supervision places, we will have to monitor the cargo status on the way.

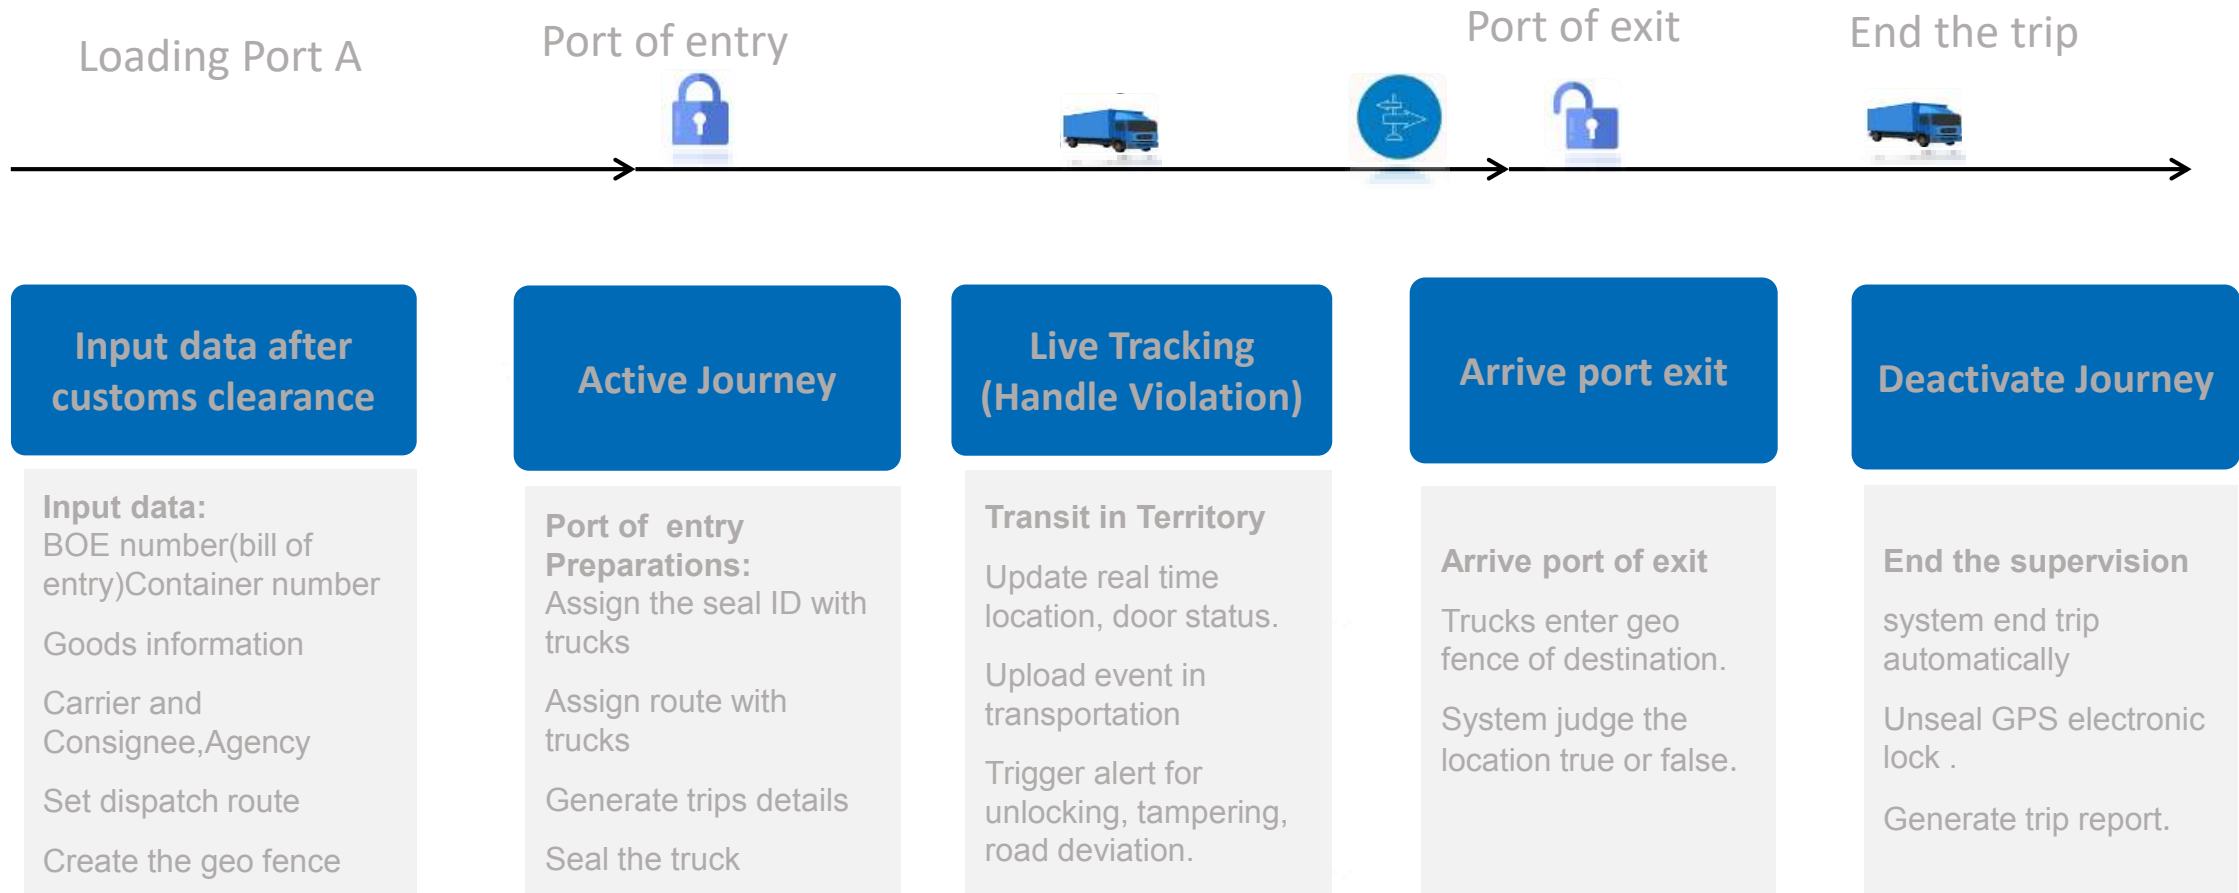

Benefits of in-transit supervision: prevention of smuggling.

Customs

Free Trade Zone, Bonded Zone

2-6 Working Process

3-Solution-Hardware

Master Lock JT701

- Live time locating & lock status
- Global network
- Nearby & Remote unlock
- **Remote control Slave unlock**

Cable Slave JT709

- Bluetooth/RFID/Remote unlock
- 3~4 months battery life
- **Cable length flexible**
- ATEX

Valve Slave JT802

- Bluetooth/Remote unlock
- Physical emergency unlock
- 2 years battery life
- **IEC EX**

The master lock can work with up to 10 slave locks

3-1 Solution-Hardware-Dry cargo

3-2 Solution-Hardware-wet cargo

3-3 Solution-Hardware-Bulk nets goods transportation monitoring

Electronic Net for bulk goods transportation

Sealing and Unsealing Processes
Mozambique Customs

3-4 Benefits

Product durability - Jointech intelligent padlocks tracks over 10,000 containers annually around the world , 90% of devices are used in customs supervision(30+ customs in different countries), except replacing some of the batteries after three years of very frequent operation, they have devices over six years old working in perfect conditions.

Increased freight in-transit visibility:

- o Real-time Information of the entire operation with a single data base information platform.
- o Decrease in safety stocks

Increased cargo traceability:

- o Integrated statistical data of the entire process
- o Ensure that supplies arrive on time and enhance border security when moving assets in and out of conflict zones.

Improved planning and operational efficiency:

- o Lower Security Costs (Cargo Escorts)
- o Reduction of cargo theft – piracy
- o Peace of mind to the end customers

3-5 Solution-Tracking software platform

Real-time monitoring, trace replay, data docking with Customs system

Geo-fencing, Route Planning

Warning of abnormality in transit

Real-time information, historical status, usage record query, business volume statistics

Apply big data analysis to identify stop-point portraits

Powerful map engine

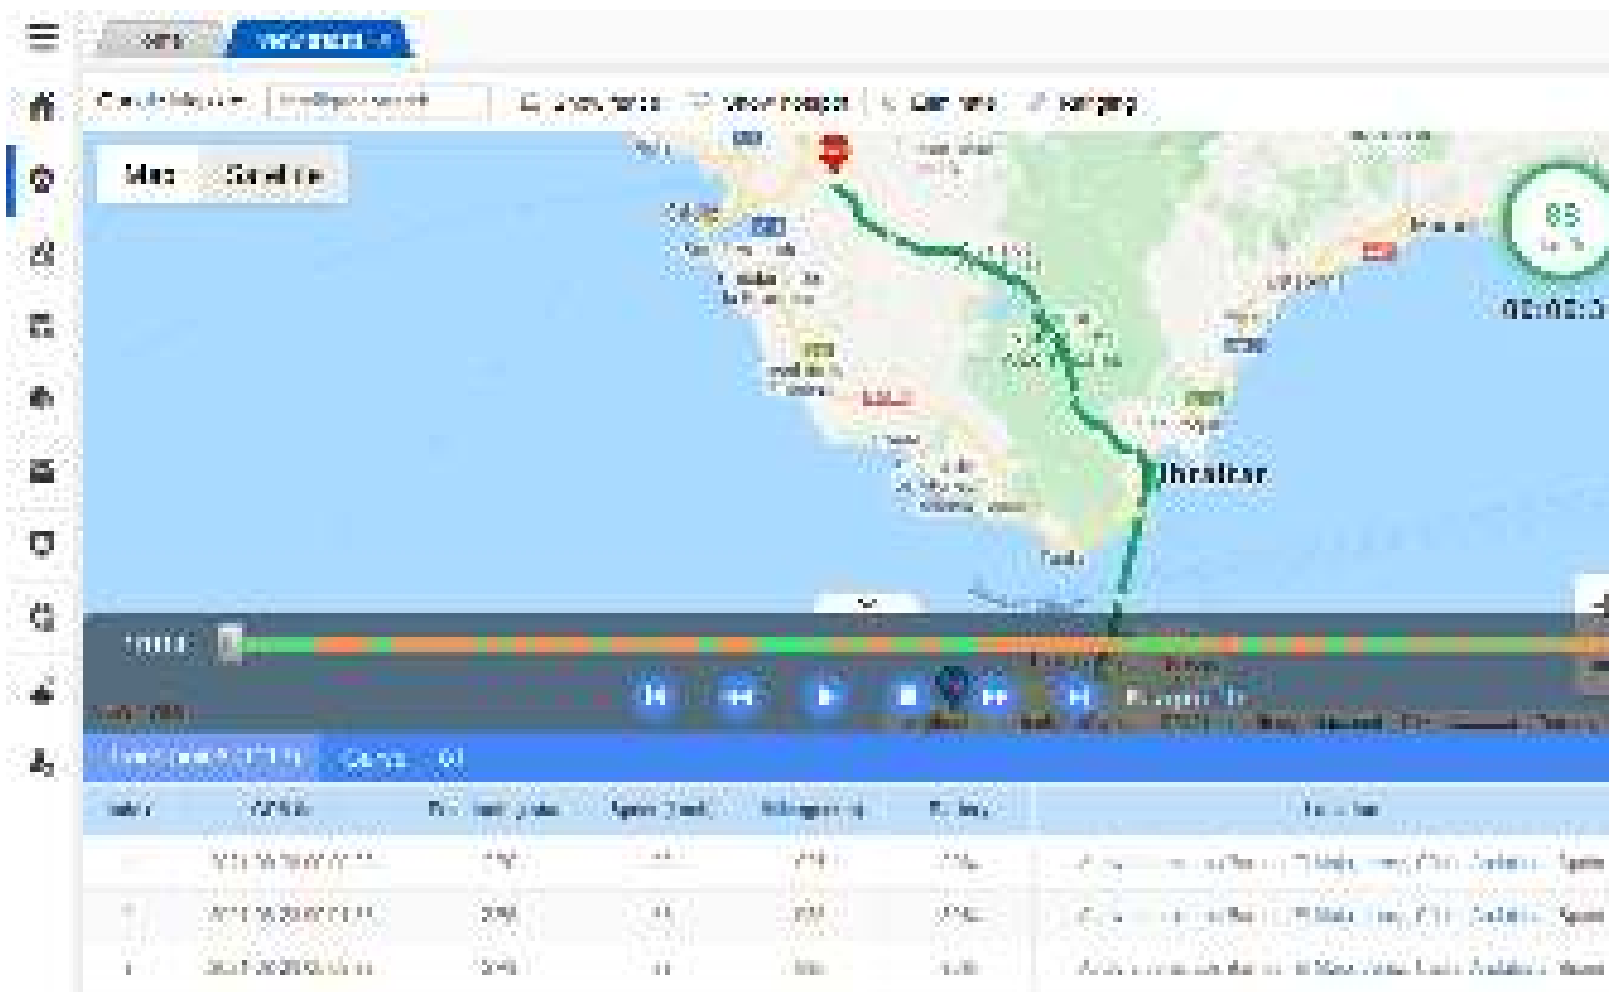

3-6 Software-Real-time Tracking

Understand the location and status of assets in real time, and respond to emergencies instantly

The screenshot displays the Jointech software interface, which is used for real-time asset tracking. The main window features a map with several asset locations marked by colored icons. A central pop-up window provides detailed information for a selected asset, including its name, ID, and status. On the right side, there is a sidebar with various controls and a 'Track' section showing a list of assets with their respective status indicators (e.g., 'On', 'Off', 'Alarm'). The bottom of the interface contains a navigation bar with various icons and a search field.

Asset ID	Asset Name	Status	Location	Details
10001	Asset 1	On	Location 1	Details 1
10002	Asset 2	Off	Location 2	Details 2
10003	Asset 3	Alarm	Location 3	Details 3
10004	Asset 4	On	Location 4	Details 4
10005	Asset 5	Off	Location 5	Details 5

3-7 Software-Tracktrace Replay

Enter the container number/equipment number in the search box for quick query

Up to 30 days of historical equipment operation traces can be checked

Historical unlock node trajectory mark

3-8 Software-Route Planning

Designate routes for assets, intelligently manage and dispatch to improve the transportation timelines

Real-time progress of transportation tasks

Lock Status

Statistics on completion of transportation tasks

Real-time status of vehicles in transit

3-9 Software-Geo-fence

Track and manage assets and events within designated areas

3-10 Software-Asset Sharing

Share asset information to designated personnel within a limited time, authorized management.

The screenshot displays a software asset management interface. At the top, a blue header bar contains the text "Asset Manager" and a small icon. Below the header, there are two main panels. The left panel shows a list of assets with columns for "Asset ID", "Asset Name", "Asset Type", and "Company". The right panel is a configuration window titled "Number of allowed devices" and contains a table with columns for "Asset ID", "Asset Name", "Asset Type", "Company", and "Number". At the bottom of the interface, there is a "Validity period" field set to "2023-01-01 to 2023-12-31" and a "Free" field. A "Share" button is visible in the bottom right corner of the configuration window.

Asset ID	Asset Name	Asset Type	Company
12	SQL Server	Software	Microsoft
13	SQL Server	Software	Microsoft
14	SQL Server	Software	Microsoft
15	SQL Server	Software	Microsoft
16	SQL Server	Software	Microsoft
17	SQL Server	Software	Microsoft
18	SQL Server	Software	Microsoft
19	SQL Server	Software	Microsoft
20	SQL Server	Software	Microsoft
21	SQL Server	Software	Microsoft
22	SQL Server	Software	Microsoft

Asset ID	Asset Name	Asset Type	Company	Number
1	SQL Server	Software	Microsoft	5
2	SQL Server	Software	Microsoft	5

3-11 Software-Alarm Push

Push events and alarm information through multiple channels, and know asset security status timely

The image displays a software interface for asset security monitoring. On the left, a dashboard shows a grid of asset status cards, each with a location icon and a status indicator. On the right, three notification channels are shown: APP, SMS, and Email.

APP: Shows a list of alarm events with details such as asset ID, location, and time.

- Asset ID: 0041300501(0041300501) [UnLock]
- Time: 2023-01-30 10:10:14
- Location: Tân Phong Industrial Zone - Phase 2, Chié, Tân Phong District, Binh province, Vietnam

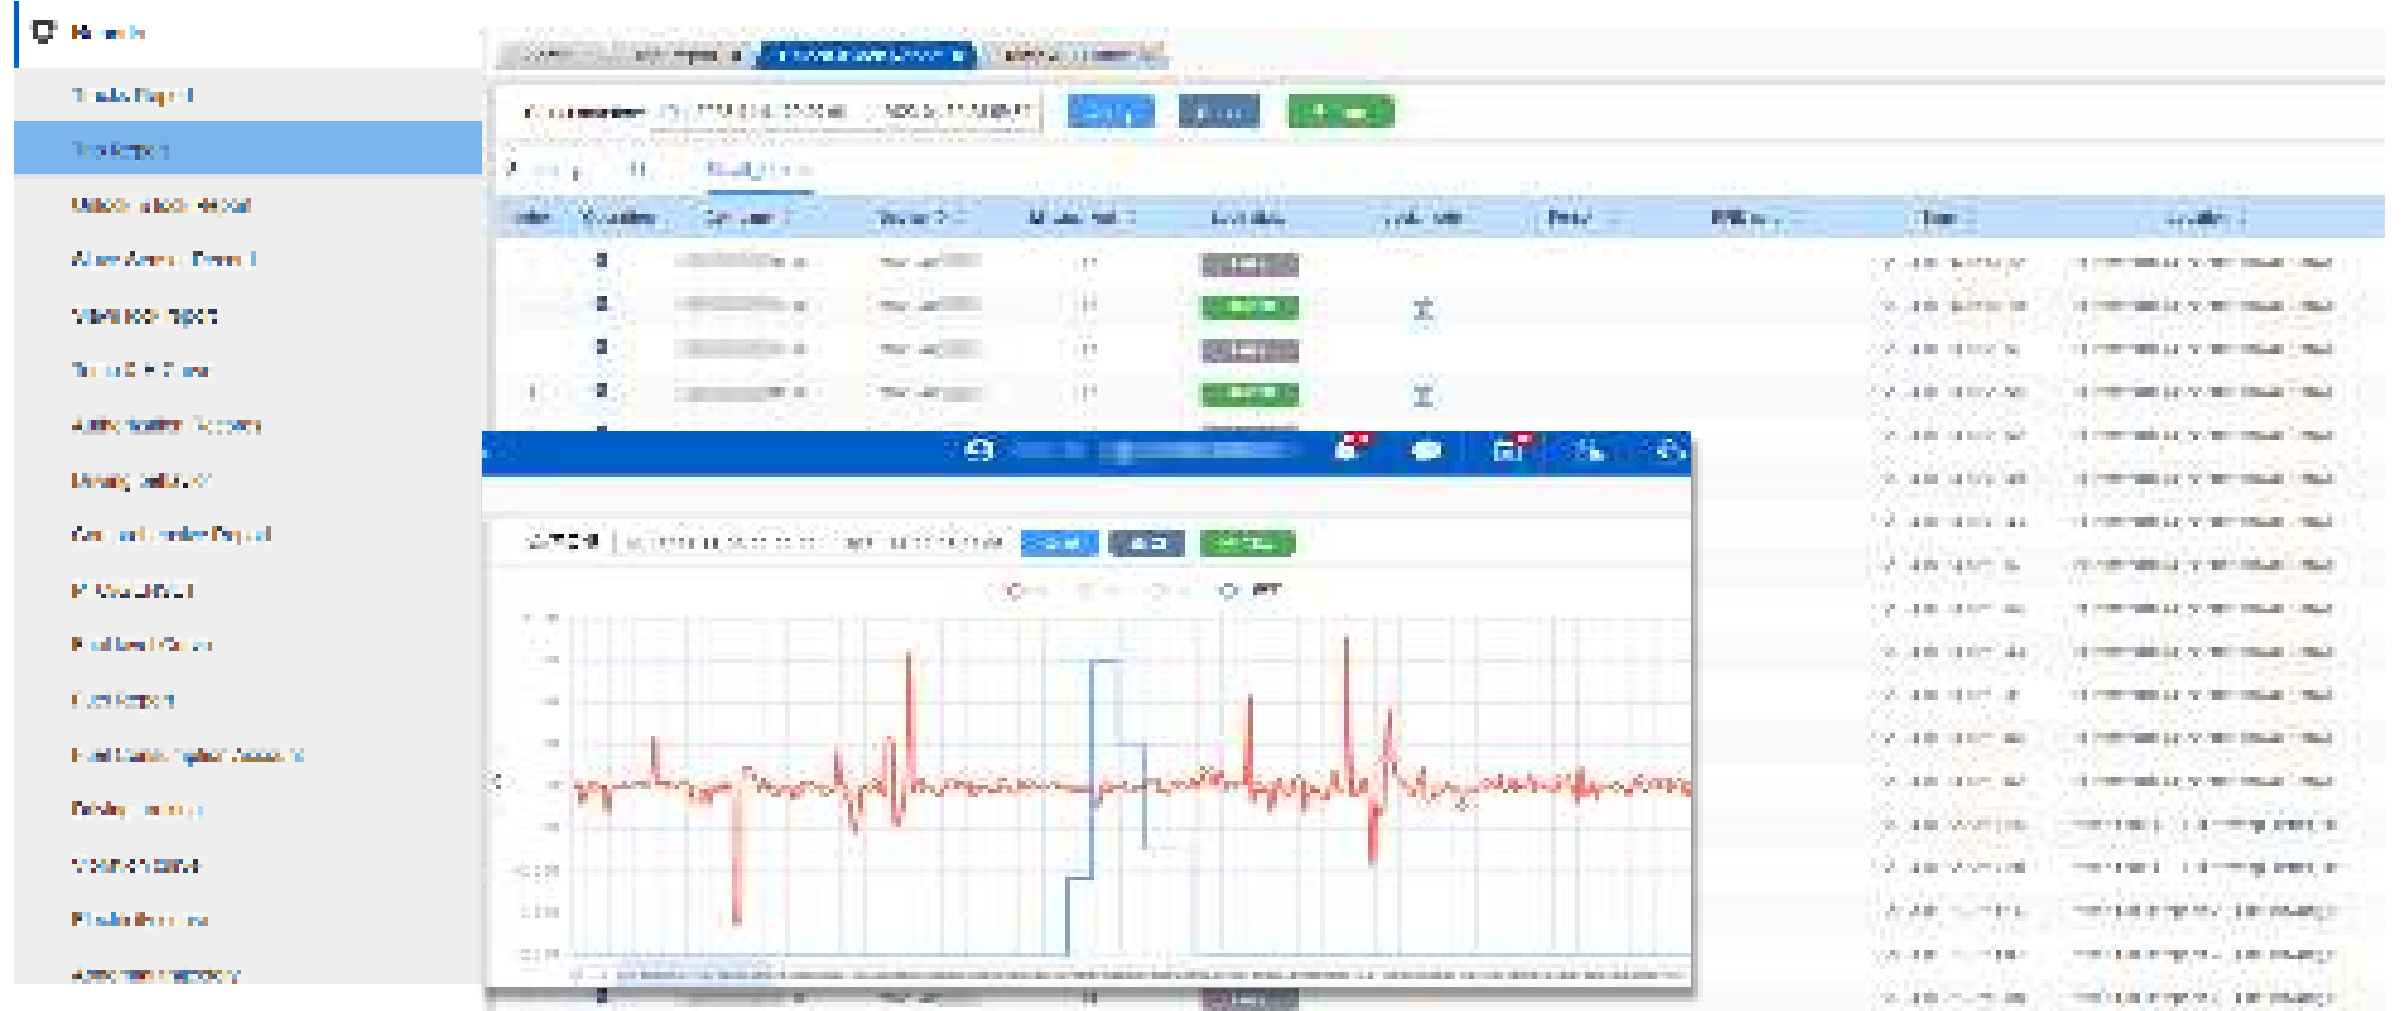

- Asset ID: 79810800110(79810800110) [Lock]
- Time: 2023-01-30 15:31:44
- Location: Ngu Road Ngu, Anzhi, Northern Zone, Tencade
- Asset ID: 0041300501(0041300501) [Lock]
- Time: 2023-01-30 10:14:07
- Location: Đường cao tốc Hà Nội - Thái Nguyên, Cầu Bông, Phố Yên, Tỉnh Hà Bắc, Vietnam
- Asset ID: 83020000000(83020000000) [Lock Door/Door]
- Time: 2023-01-30 15:06:53
- Location: Shenyang-Haikou Expressway, Shijian, Banlan District, Shenyang province, China

SMS: Shows a text message notification in Chinese, providing the same asset and location details as the APP notification.

Email: Shows an email notification with a subject line "Asset Alarm(Event) Notification" and a detailed body containing asset information, event type, time, location, and contact details.

3-12 Software-Charts&Reports

Asset data chart analysis, big data analysis and intelligent management

3-13 Software-Charts&Reports

Flexible decentralized management, convenient management of system users and assets

The screenshot displays an AdminPanel interface with a sidebar menu on the left and a main content area on the right. The sidebar menu includes:

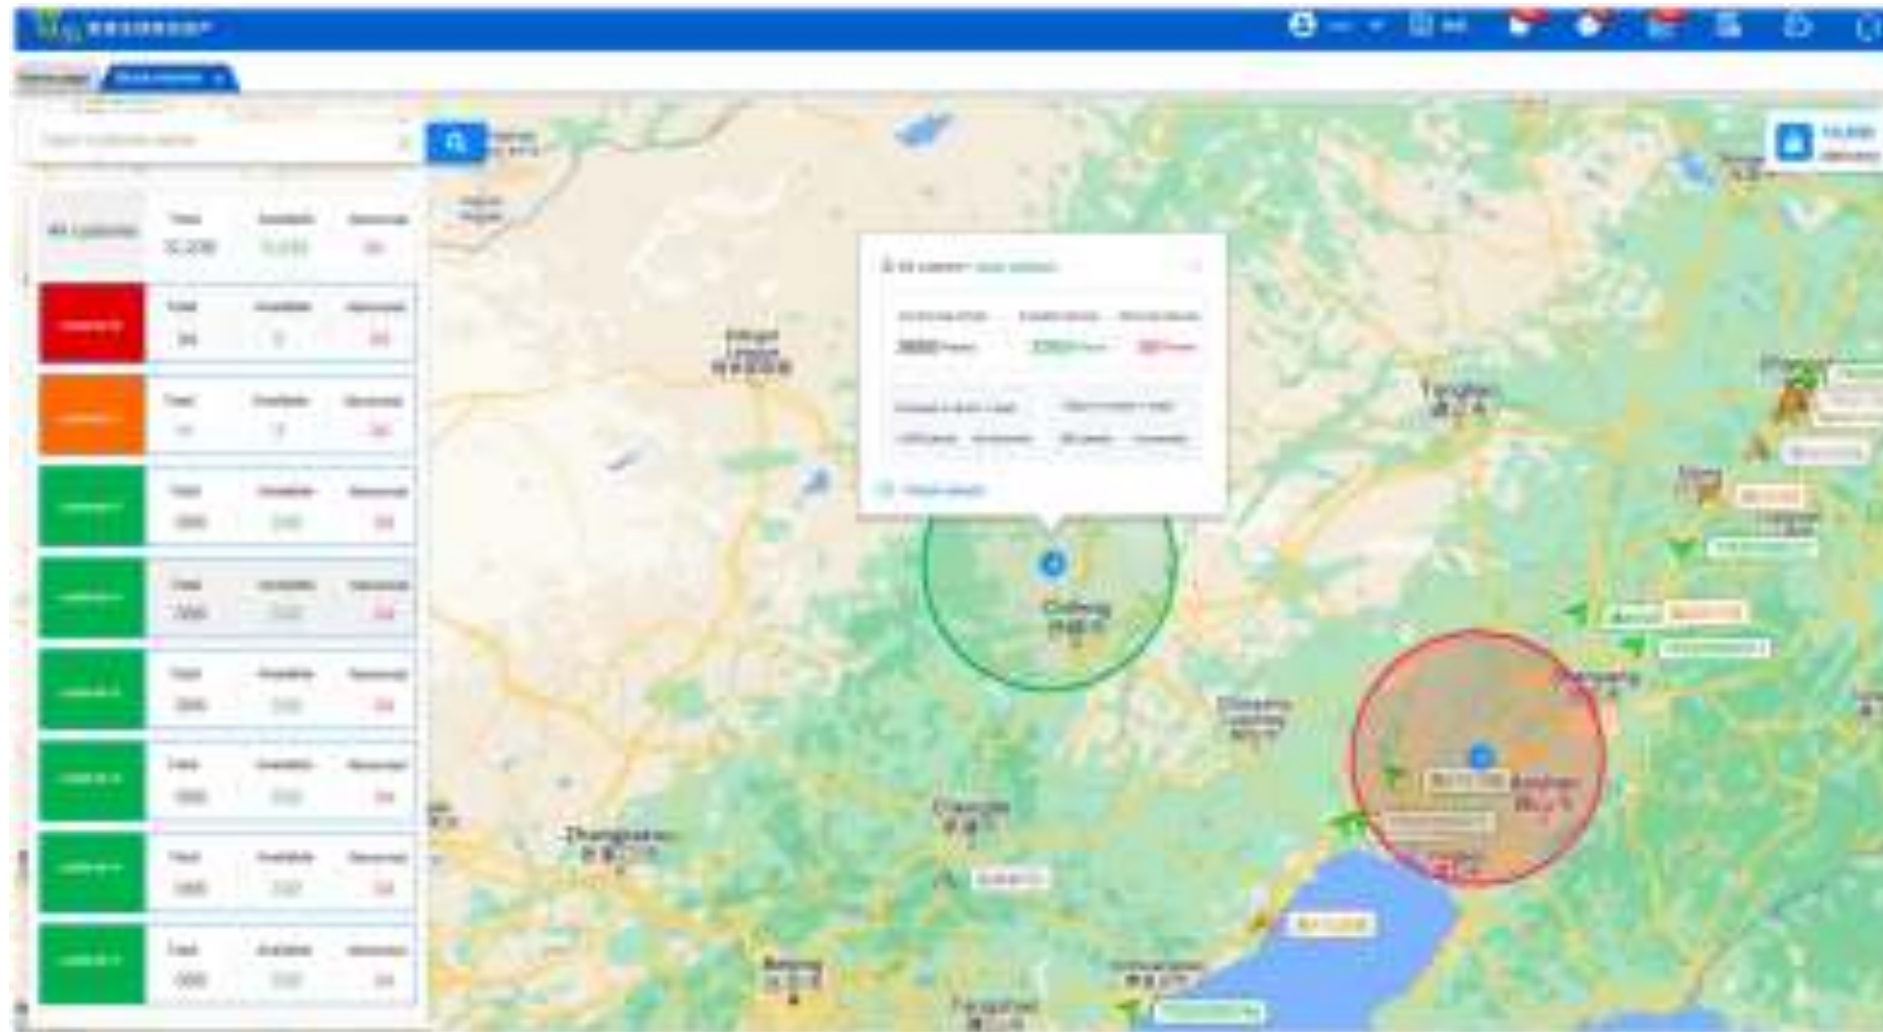

- AdminPanel
- Company Management
- User Management
- Asset Management
- Device Management
- Driver Management
- Role Management

The main content area is divided into several sections:

- System Information:** Includes fields for 'System Name', 'System Version', 'System Type', and 'System Status'.
- System Settings:** A grid of toggle switches for various system parameters, including 'System On/Off', 'System Update', 'System Backup', 'System Restore', 'System Reset', 'System Clear', 'System Cache', 'System Log', 'System Audit', 'System Security', 'System Privacy', 'System Analytics', 'System Reporting', 'System Monitoring', 'System Alerting', 'System Notification', 'System Integration', 'System Interoperability', 'System Compatibility', 'System Performance', 'System Reliability', 'System Availability', 'System Scalability', 'System Flexibility', 'System Adaptability', 'System Resilience', 'System Robustness', 'System Durability', 'System Longevity', 'System Sustainability', 'System Environmental', 'System Social', 'System Ethical', 'System Responsible', 'System Transparent', 'System Accountable', 'System Trustworthy', 'System Credible', 'System Reputable', 'System Respected', 'System Valued', 'System Appreciated', 'System Grateful', 'System Gracious', 'System Generous', 'System Kind', 'System Caring', 'System Compassionate', 'System Empathetic', 'System Understanding', 'System Tolerant', 'System Forgiving', 'System Patient', 'System Calm', 'System Peaceful', 'System Harmonious', 'System Balanced', 'System Equitable', 'System Fair', 'System Just', 'System Right', 'System Good', 'System Virtuous', 'System Noble', 'System Honorable', 'System Dignified', 'System Respectful', 'System Polite', 'System Courteous', 'System Gracious', 'System Generous', 'System Kind', 'System Caring', 'System Compassionate', 'System Empathetic', 'System Understanding', 'System Tolerant', 'System Forgiving', 'System Patient', 'System Calm', 'System Peaceful', 'System Harmonious', 'System Balanced', 'System Equitable', 'System Fair', 'System Just', 'System Right', 'System Good', 'System Virtuous', 'System Noble', 'System Honorable', 'System Dignified', 'System Respectful', 'System Polite', 'System Courteous'.
- System Components:** A table listing various system components and their status.

Component Name	Location	Version	Status	Type	Category	Configuration	Management
Microsoft Windows	Windows	10	Running	OS	System	Windows Update	Windows Defender
Microsoft Office	Office	16.0	Running	Application	Productivity	Office 365	Office 365

3-16 Software interface of locks roatation

4-1 Cases-Jordan Custom

Project background:

This project mainly applies customs cargo transportation supervision, replacing the electronic locks purchased by original customers from Europe, monitoring the transportation of container cargo from port to warehouse, ensuring transparent management during transportation, and improving the speed of customs clearance.

By using smart electronic lock devices instead of escorts to reduce management costs and service efficiency, to promote trade at the Jordanian border and increase taxes in a cost-effective manner, and improve trade facilitation processes.

Quantity: 3000pcs Model: JT701

Benefits:

Increased supply chain visibility

Increased cargo traceability

Improved planning and operational efficiency

Reduce customs clearance time

4-2 Cases-COMESA

Quantity: 15594pcs , Model: JT701

Project background: The flow of goods between member countries, the monitoring of cross-border transportation of containers and the convenience of customs clearance, COMESA agencies or authorized agencies will seal and unblock containers/truck and manage them in a unified manner.

the project scale is 15,594 units. Currently, it is mainly implemented in three countries: Congo (10,000 units), Zambia (500 units) and Malawi (5094 units).

The requirements of this project are fully matched with our company's intelligent electronic lock JT701, led by the then Secretary-General Cindiso Ngwenya, and implemented by his assistant and financial adviser Salah and his team.

4-3 Cases-India Customs

New export procedure as per Circular 52/2017

USE OF THE MANDATORY SECURITY AND MEASUREMENT CAPABILITY OF TRANSITORY ELECTRONIC CHECK NUMBER SYSTEM THE NATIONAL BILL FOR EXPORTS THROUGH LAND CUSTOMS STATION (NATIONAL BILL OF THE CUSTOMS)

The use of this facility will increase the export by 20%. Digital communication through Customs India, ensures that for every at the export terminal no import will come of the border. Use of the implementation of ECTS border checks will be avoided. Cases for the export of goods to Bangladesh the goods were first sent to Port Port Durgam and then from the goods were exported through sea via Sri Lanka to Bangladesh. The entire process took almost 2 months. If the goods sent via road transport then the containers were stuck up at Petrapole Land Customs Station for 20 days and it took 1 month for the goods to finally arrive at their destination. However, after ECTS the status will be real-time, any time, anywhere.

Project Background:

Earlier for export of goods to Bangladesh the goods were first sent to Port from Kanpur and from there the goods were exported through sea via Sri Lanka to Bangladesh.

This entire process took almost 2 months. if the goods sent via road transport then the containers were stuck up at Petrapole Land Customs Station for 20 days and it took 1 months for the goods to finally arrive at their destination.

Quantity: 4000ocs Model: JT701

Decreased Customs Clearance Time- with the implementation of ECTS, the border checks will be avoid, which will reduce the customs clearance and logistics time a lot.

Increased Cargo Traceability -the cargo status can be delivered in real-time, any time, anywhere

4-4 Cases-Ghana Customs

Project background:

On March 29, 2018, the Government of Ghana, through the Ministry of Trade and Industry, signed an agreement with Ghana Link Services to provide a fully integrated trade facilitation and customs management system (UNIPASS) for the Ghana Tax Administration-Customs Department.

The electronic customs system increases government revenue and boosts the domestic economy by facilitating rapid customs clearance at various ports, thereby increasing productivity and optimizing the supply chain to accelerate industrial production.

Quantity: 4000pcs Model: JT701

Ghana Customs is currently implementing a new integrated customs management system, requiring integrated supervision of import/export goods in various ports across the country, thereby reducing the management cost of import and export trade.

For containers and goods in the process of cross-border transportation, it is necessary to install intelligent electronic locks to realize the supervision of the cargo transportation process and the status of the container.

4-5 Cases-Tanzania Revenue Authority

Project background: The Electronic Cargo Tracking System (ECTS) launched by the Tanzania Revenue Authority (TRA) Customs is one of TRA's measures to modernize its customs business.

The purpose is to improve the monitoring of transit goods by replacing it with smart electronic lock devices.

Personnel escorted to reduce management costs and service efficiency to promote cross-Tanzania border trade and increase taxes in a cost-effective manner, and improve trade facilitation processes:

Model: JT701 , total order quantity: 10,000pcs

Benefits:

- Real-time identification of the basis for illegally transferred goods/improvement of taxation
- Reduce transportation time/improve transparency
- Reduce the physical inspection of transit goods / increase truck turnaround time and reduce business costs

A total of 9 companies are authorized for this project, and 6 companies cooperate with Jointech.

4-6 Cases-Mozambique Customs

Project background:

Mozambique exports oil. Tank trucks transport the oil from various oil processing plants to the border customs. The tank trucks need to be monitored throughout the process to prevent oil theft. They use Jointech's electronic lock child and mother lock solution, the mother lock JT701D is placed in the cab, and the child lock locks the oil inlet valve and the oil outlet valve. The tanker will be sealed when it departs and unsealed when it arrives at the destination. There are dozens of sites across the country for the sealing and unblocking of electronic locks.

Quantity: 4020pcs Model: JT701D, JT709, JT705A Time: 2021

The story behind:

The successful implementation of this project benefited from the good cooperative relationship between our company and NUCTECH. We can quickly respond to customer requirements, work in a team, quickly provide solutions, and build trust. For example, our sales team and technical team held more than 10 video or telephone conferences with customers and the NUCTECH team to discuss issues, introduce solutions, and solve problems.

4-7 Cases-Congo Customs

Project background:

The Congo Customs Container Monitoring Project aims to improve the monitoring of transit goods, reduce management costs and service efficiency by replacing personnel escorts with smart electronic lock devices, so as to promote cross-Tanzania border trade and increase in a cost-effective manner Taxation to improve the trade facilitation process:

Quantity :10000pcs Model :JT701

Benefits:

- Monitor and manage the container,
- Protect client' s cargo and avoid cargo theft.
- Real time monitoring of location of container
- Quick response for tempering of device

4-8 Cases-Belarus Customs

The heads of state of the Eurasian Economic Union member states signed an agreement in Moscow in April 2022 on the use of smart electronic locks in the Eurasian Economic Union to ensure the rapid flow of goods between the Union countries.

Belarus took the lead in using Jitong's electronic locks to supervise cross-border cargo transport vehicles, requiring all trucks entering the country from Lithuania, Poland, and Latvia to be equipped with electronic locks, which can only be unlocked when they leave the country. Currently, the system has 4,000 simultaneous monitoring devices every day tower.

Customer Feedback Through the use of smart electronic locks, the risk management system of member states has been greatly optimized, and the inspection of goods transported by transit vehicles has been minimized, customs clearance efficiency has been improved, the cost of the carrier has been reduced, and the transparency of transportation has also been ensured , which eliminates the gray, shadow trade.

Eurasian Economic Union: 19,000 units

Company Introduction

Shenzhen Joint Technology Co., Ltd. was established in 2006 with registered trademark Jointech, a national high-tech enterprise; a subsidiary company of listed company in China main Board stock.

Our company focuses on the IOT application of smart logistics, especially for the logistics equipment carrying, smart logistics, and the status safety of the assets consigned by these equipment, global solutions are proposed to ensure that customers can reduce costs, ensure safety, information transparency, and scientific decision-making.

At present, Jointech has provided reliable high-performance products and solutions with sustainable advantages for national customs, tax revenue department of 35 countries, and integrated solution providers, etc.

Production Capacity

Jointch has professional standard production line, and have bulk order production capacity. The production capacity can reach 200,000 pcs smart hardware per year.
