

Intelligent Customs Facilitating Enterprise Development

AUSCA INTERNATIONAL OILS AND GRAINS CO., LTD

Company Profile

AUSCA INTERNATIONAL OILS AND GRAINS CO., LTD was established in August 2020, is a set of edible vegetable oil, vegetable protein and phospholipid products research and development, production, processing , domestic and international production, trade and marketing as one of the integrated grain and oil processing enterprises. The speed of plant construction in only six and a half months, the fastest speed of plant construction in the industry.

It is the first pilot enterprise in China that enjoys the policy of exempting import tariffs for 30% of value-added processing and is also a key investment project of Yangpu Economic Development Zone.

The company integrates informatization and industrialization in depth, using big data, industrial Internet, enterprise cloud and other technologies to achieve digital and visual management of factories. It has a canola/soybean production line with an annual processing capacity of 1 million tons, an oil refining line with an annual processing capacity of 300,000 tons and a packaging oil production line with an annual processing capacity of 160,000 tons, which drives the construction and development of related industries, and promotes the clustering of international bulk food processing and trade industry in Yangpu Economic Development Zone.

Intelligent Supervision

The customs supervision system is embedded in Ausca's visualization monitoring system, realizing the remote visualization supervision of the whole process of the enterprise's raw material transportation routes, receiving and unloading, storage, processing and scraps.

Intelligent supervision-oriented, the use of infrared alarms, smart gate barriers and other intelligent scientific and technological means to strengthen accurate supervision and efficient service, to achieve the freight driver "zero on zero off" customs clearance, and effectively enhance the speed of the enterprise to pick up the vehicle in and out of the gate barriers.

Convenient Customs Clearance

International Trade "Single Window" System

Through the "Single Window" standard version, one access, one submission, one check, one key-tracking, one-stop processing, which called "Five One". That meet the requirements of port management and international trade-related departments of the standardized documents and electronic information to achieve the sharing of data and information, the implementation of the function of management, optimize the customs clearance business process, in order to promote the docking of international trade cooperation, will be a large customs clearance process by the "tandem" changed to the "parallel", and effectively solved the problem of multiple declarations by the enterprise, repeated declarations.

International Trade "Single Window" System

Optimized Model For Convenient Customs Clearance of Multiple Vehicles in One Ticket

Haikou Customs, Yangpu Customs, system development units and other relevant departments linked into the enterprise on-site work, the Customs led the development of auxiliary systems, in line with the conditions of customs supervision, the opening of the "one-ticket, multi-vehicle convenient customs optimization mode" function. It solves the problem of one-ticket goods from Yangpu Bonded Port Zone being sold out of the zone, and after the declaration of the release order, it needs a one-time centralized vehicle to complete the transportation of the enterprise's congestion problem.
