

WATER QUALITY ANALYSIS IN INDUSTRIAL EFFLUENT PERFORMANCE MONITORING

9 & 10 MAY 2024

8.30 AM – 5.00 PM

SABAH

TS DR FATEHAH MOHD OMAR

12 CPD Hours*

(EIMAS/2024/CPD0469/MFA)

OVERVIEW

- **MODULE 1:** This module covers on the wastewater treatment system and the respective functions of each component. Each component is explained on its function and how it supports one another in the system from the inflow till the point of discharge. Two types of wastewater treatment systems are discussed in this module i.e. chemical and biological. In an ideal industrial effluent treatment system, the optimum performance is discussed. The possible problems that could arise and the proposed solutions for troubleshooting is highlighted.
- **MODULE 2:** This module covers on the theoretical part how the information from the water quality parameters serves to support the performance of the wastewater treatment plant. Selected water quality parameters are discussed. Standards and relevant guidelines are briefly discussed.
- **MODULE 3 & 4:** This module covers on the data interpretation and how to calculate to check on the efficiency of the wastewater treatment plant. Further discussion covers the arising problems and troubleshooting options in the wastewater treatment plant.

OBJECTIVES

- To gain a better understanding of the anatomy of the wastewater treatment plant and how it serves the system's performance.
- To understand the theories and how the water quality affects the efficiency of the wastewater treatment system.
