

# ESG FORUM 2.0

CONTINUING THE ESG JOURNEY:  
CIRCULAR ECONOMY & GREENING  
THE SUPPLY CHAIN

## OVERVIEW

Circular economy is an innovative paradigm that contrasts the traditional linear "take-make-waste" model. Instead, it envisions a regenerative system where resources are used efficiently, products are designed for longevity, and waste is minimized. This approach promotes the continual use and repurposing of materials, creating a closed-loop system that reduces environmental impact. At the core of ESG lies the commitment to responsible environmental practices, social well-being, and effective governance.

ESG criteria play a crucial role in developing a circular economy. Environmental sustainability is at the forefront of ESG considerations, and companies must prioritize sustainable practices to reduce their environmental impact. To develop a successful circular economy that prioritizes ESG criteria, companies must take a holistic approach that considers all aspects of sustainability as well as influencing the supply chain. This includes reducing waste and emissions, promoting renewable energy sources, investing in sustainable technologies and infrastructure, and prioritizing social responsibility.

## SPEAKERS

Mr S. Jai Shankar  
Malaysia External Trade  
Development Corporation  
MATRADE

Mr Abd. Malik Bin Atan  
Malaysian Green Technology  
and Climate Change  
Corporation MGTC

Mr Abdul Aziz Bin Long
