

# SCALING UP DETECTION CAPABILITIES

Designing an Effective Command Centre CONOPS

# OBJECTIVES

Define and explain CONOPS in a Command Center.

Highlight the importance of a robust Command Center CONOPS.

Discuss integrated management benefits and case studies.

Review types of data for analysts and training best practices.

Introduce relevant international standards and implementation strategies.

Conduct a hands-on threat identification exercise.

Facilitate a Q&A session and recap key points.

# COMMAND CENTERS

A SHARED VISION

**A command center is a centralized facility where operations are managed and supervised. It serves as the hub for gathering, processing, and disseminating information, making decisions, and directing actions.**

# CONOPS

# CONCEPT OF OPERATIONS

# HOW DOES A THOUGHTFUL CONOPS SUPPORT COMMAND CENTERS?

Clarity and Direction

1

Resource  
Management Efficiency

2

Security and Compliance

3

Scalability and Flexibility

4

Training and  
Quality Control

5

Operational Efficiency

6

# HOW DOES A THOUGHTFUL CONOPS SUPPORT COMMAND CENTERS?

## Clarity and Direction

## Resource Management Efficiency

## Security and Compliance

## Scalability and Flexibility

## Training and Quality Control

## Operational Efficiency

# WHICH OF THESE FACTORS PRESENTS THE GREATEST CHALLENGE TO IMPLEMENTING AN EFFECTIVE CONOPS?

A.

Clarity and Direction

B.

Resource  
Management Efficiency

C.

Security and Compliance

D.

Scalability and Flexibility

E.

Training and  
Quality Control

F.

Operational Efficiency

In the WCO app, please go to break-out session B1 and click on the link under the "Session information" title. This will open up Slido. In Slido navigate to the Polls section and answer the question.

# A CASE STUDY: LEVERAGING A COMMAND CENTER

Identify the Current State and Challenges

# A CASE STUDY: COMMAND CENTER CONSOLIDATION

Identify the Current State and Challenges

Define the Vision for Consolidation

Develop Technical Infrastructure

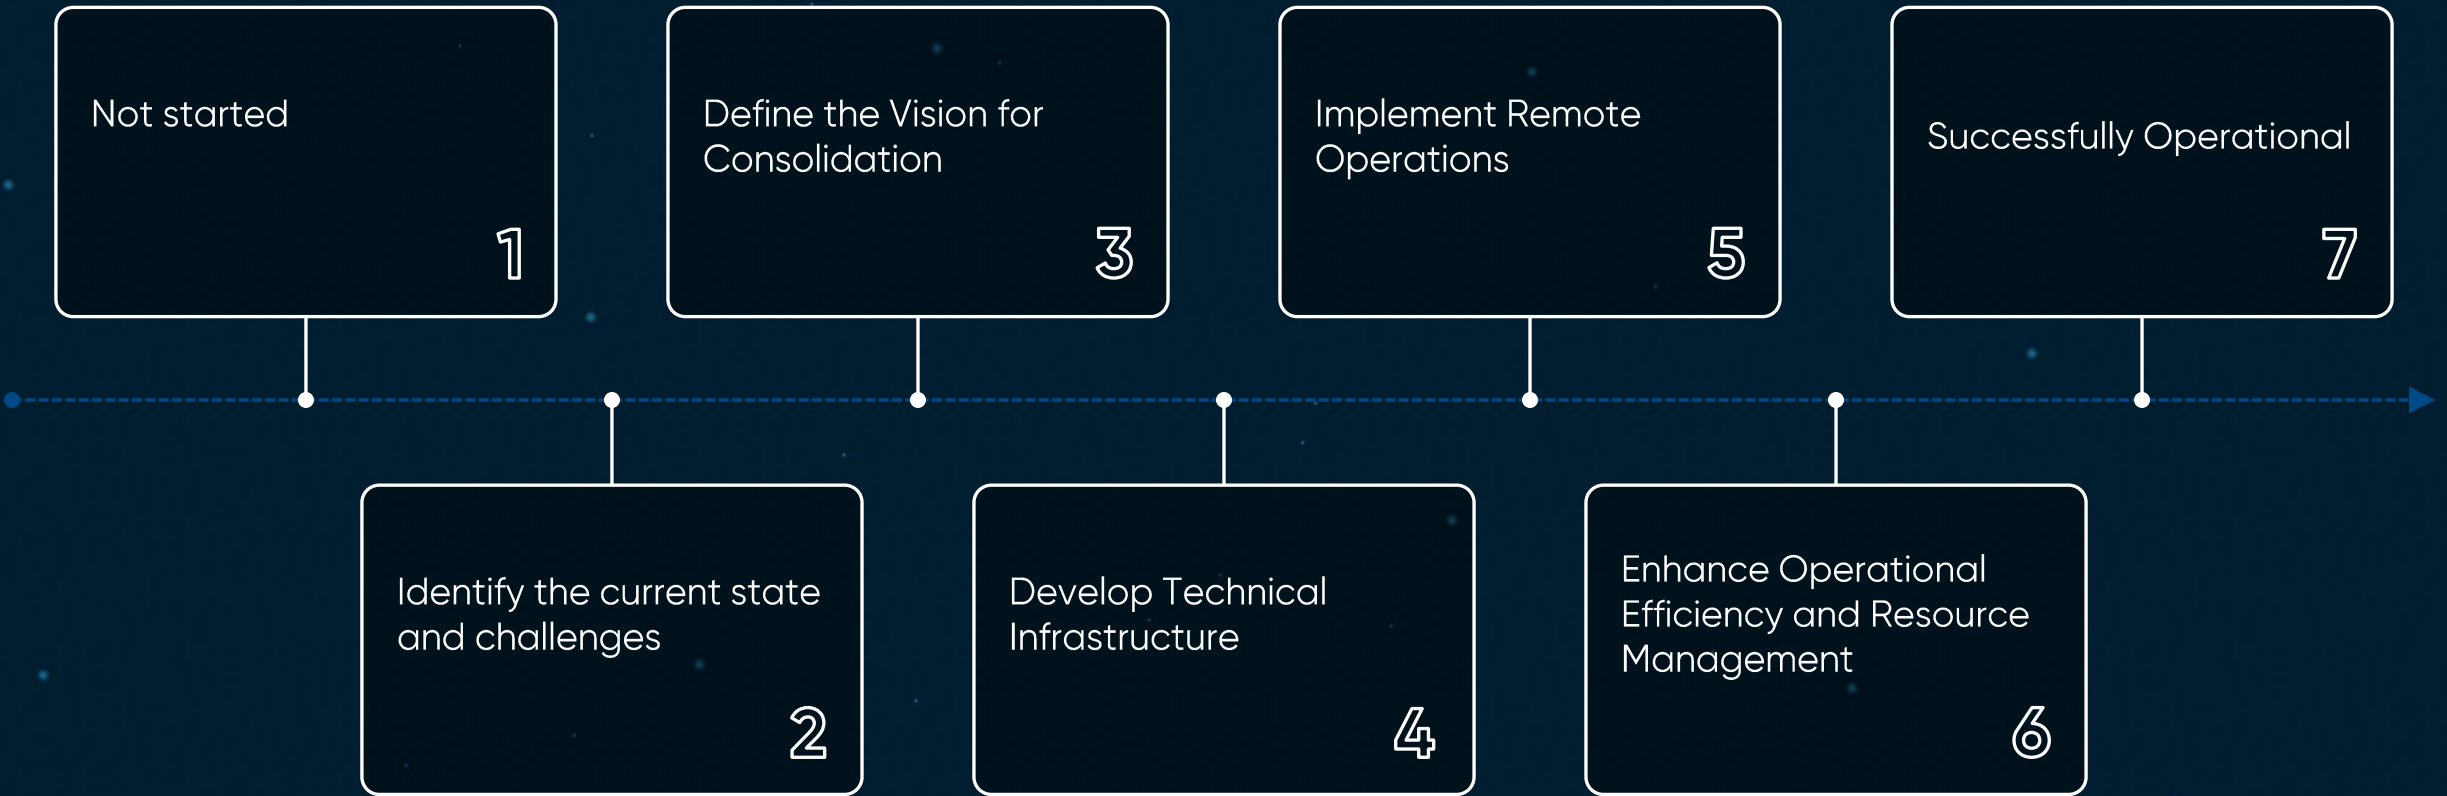

Leverage Remote Adjudication Operations

Enhance Operational Efficiency and Resource Management

Define ConOps

# IF THIS IS A PROJECT MAP TIMELINE, WHERE ARE YOU IN ESTABLISHING A COMMAND CENTER?

# The Research Foundation to Remote Screening

### Performance of X-ray baggage screeners in different work environments: Comparing remote and local cabin baggage screening

Marius Latscha <sup>a,\*</sup>, Adrian Schwaninger <sup>a</sup>, Jürgen Sauer <sup>b</sup>, Yanik Sterchi <sup>a</sup>

<sup>a</sup> University of Applied Sciences and Arts Northwestern Switzerland, School of Applied Psychology, Institute Humans in Complex Systems, Riggensbachstrasse 16, CH-4600, Olten, Switzerland

<sup>b</sup> University of Fribourg, Department of Psychology, Rue P.A. de Faucigny 2, CH-1700, Fribourg, Switzerland

# Comparing Screening Performance in LCBS vs RCBS

## Local cabin baggage screening (LCBS)

- › Images are analysed at the checkpoint
- › Screener is positioned at the **lane**

## Remote cabin baggage screening (RCBS)

- › Central image processing (CIP):  
Images are pooled and sent to a remote room
- › Screener is positioned in a **remote room**

## Threat image projection (TIP)

- › Fictional threat items (FTIs) are projected into X-ray images during regular baggage screening
- › TIP system records whether the analyzing screener has detected (hit) or missed (miss) the item
- › Hit rate and processing time on TIP images can be calculated

## Data

- › TIP data from a European airport with LCBS & RCBS in place
- › The same screeners worked in both settings
  - 642,035 decisions on TIP images made by 1,482 screeners

# Investigating Screening Performance

Detection of prohibited articles (hit rate)

Processing time/reaction time

Environmental stressors (noise) and social stressors (queuing)

Time on task and task load

Inter-individual performance of screening officers

## Expected findings for remote screening (RCBS)

### Question:

- Which of the following statements do you expect to be true?
  - A. Higher Hit Rate & Higher Reaction Time
  - B. Higher Hit Rate & Lower Reaction Time
  - C. Lower Hit Rate & Higher Reaction Time
  - D. Lower Hit Rate & Lower Reaction Time
  - E. There is no correlation

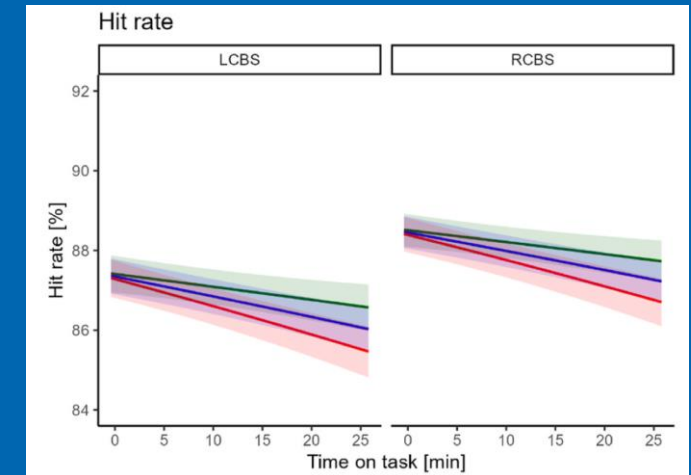

Detection of prohibited articles (hit rate)

Processing time/reaction time

### The correct answer is:

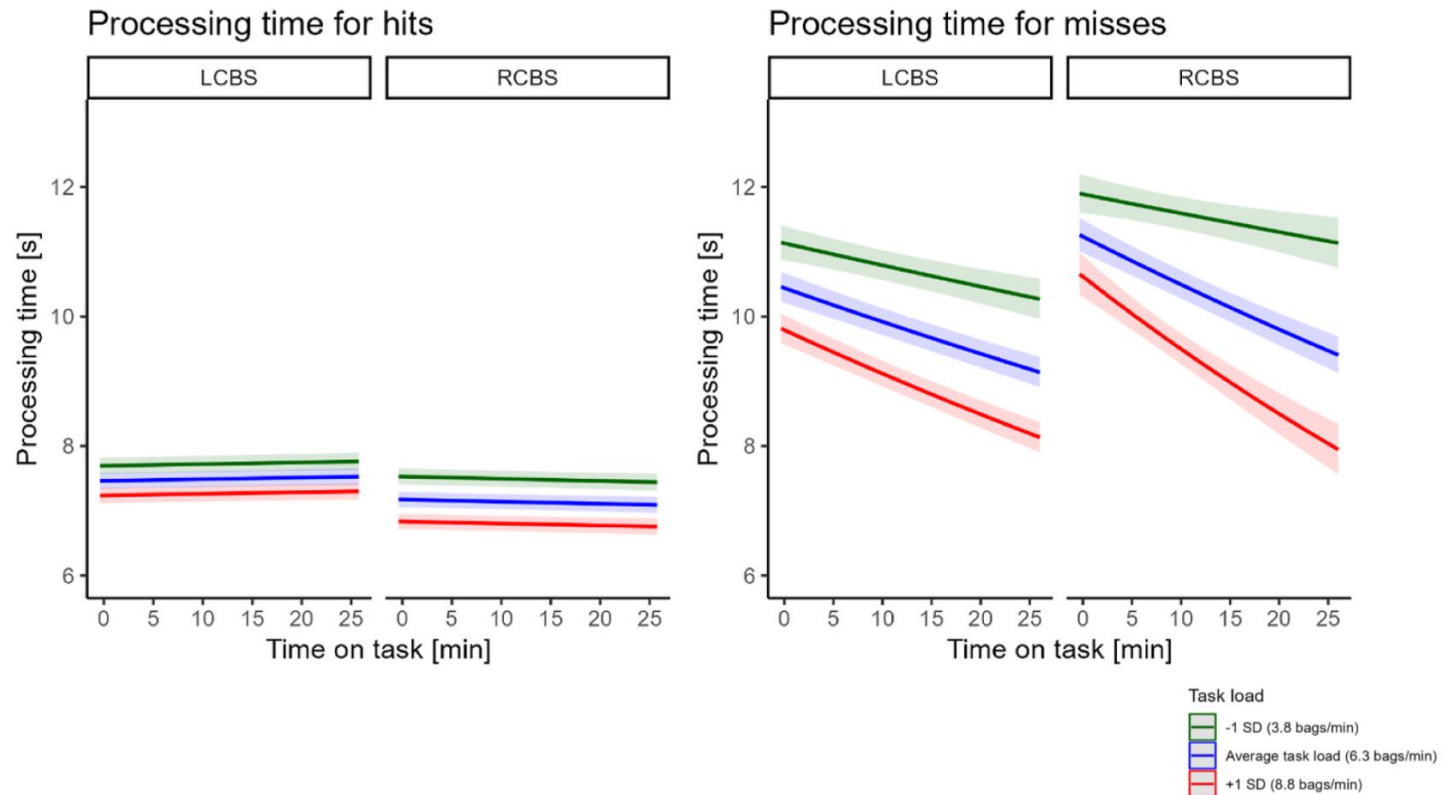

- A. Higher Hit Rate & Higher Reaction Time

## Expected findings for remote screening (RCBS)

### Reaction times for hit and miss differ:

- Processing times in remote screening are faster for hits
- Processing times in remote screening are slower for misses

## Expected findings for remote screening (RCBS)

### › Noise

- Conveyor belts, engines, chatting public, announcements
- LCBS = 56 to 68 dBA
- RCBS = approx. 40 dBA (office)

### › Social Stressors

- Difficult and impatient passengers or transporters
- Queues, time pressure

## Expected findings for remote screening (RCBS)

- › As expected, hit rate decreased with increasing time on task and task load (in both settings)
  - Stronger decrease when task load is higher

- › What has the biggest effect in detection performance?
  - A. Noise and Social Stressors
  - B. Time on Task and Task Load
  - C. Both Equally

The correct answer is:

- › A. Noise and Social Stressors

- First evidence for better human-machine system performance in RCBS
  - Higher hit rate in RCBS
  - Some costs in efficiency (response times slightly higher)

- Time on task and task load are relevant in both work settings
- Comparable effect sizes for [work setting], [time on task] and [task load]:
  - Each led to changes of 1-2 percentage points in the hit rate

- Differences between individual screeners are larger than effects of work setting, time on task and task load
  - This underlines the importance of computer-based training

Thank you for now!

~~IMAGE ANALYST TRAINING~~

~~DATA ANALYST TRAINING~~

# CUSTOMS ANALYST TRAINING

**A PROFESSIONAL SPECIALIST**

# OVERVIEW OF DIFFERENT KINDS OF DATA THAT ANALYSTS NEED TO REVIEW:

Machine and human resources

X-ray and imaging data

Historical data and trends

Intelligence reports and risk assessments

Cargo and shipment documentation

Real-time alerts and sensor data

# ARE YOU READY FOR AN INTERVIEW

25

How many golf balls can fit into a bus?

 You have 1 minute!!

## KEY SKILLS AND KNOWLEDGE REQUIRED FOR DATA ANALYSTS

### Technical Proficiency

Clarifying assumptions, packing efficiency, knowledge of calculations

### Analytical Skills

Define problem, identify assumptions, utilize logical reasoning

### Attention to Detail

Identifying/researching exact measurements, real-world considerations

### Problem Solving Abilities

Deconstructing the problem, evaluating options, reviewing and refining

### Communication Skills

Asking questions, active listening, engagement, interaction

# TRAINING METHODOLOGIES

Comprehensive Training Programs

Explore Learning Methodologies

Simulation and Real-World Testing

Feedback and Improvement

Continuous Oversight and Quality Control

# Enhancing Detection Capabilities in X-Ray Screening: The Human Factor

**Sara Bracceschi**

Head of Consulting and Services for Customs  
Customer Relations & Sales

Inter-individual performance of screening officers

Individually adaptive computer-based training (CBT) is a very powerful tool

Exposure to objects not often encountered in everyday life

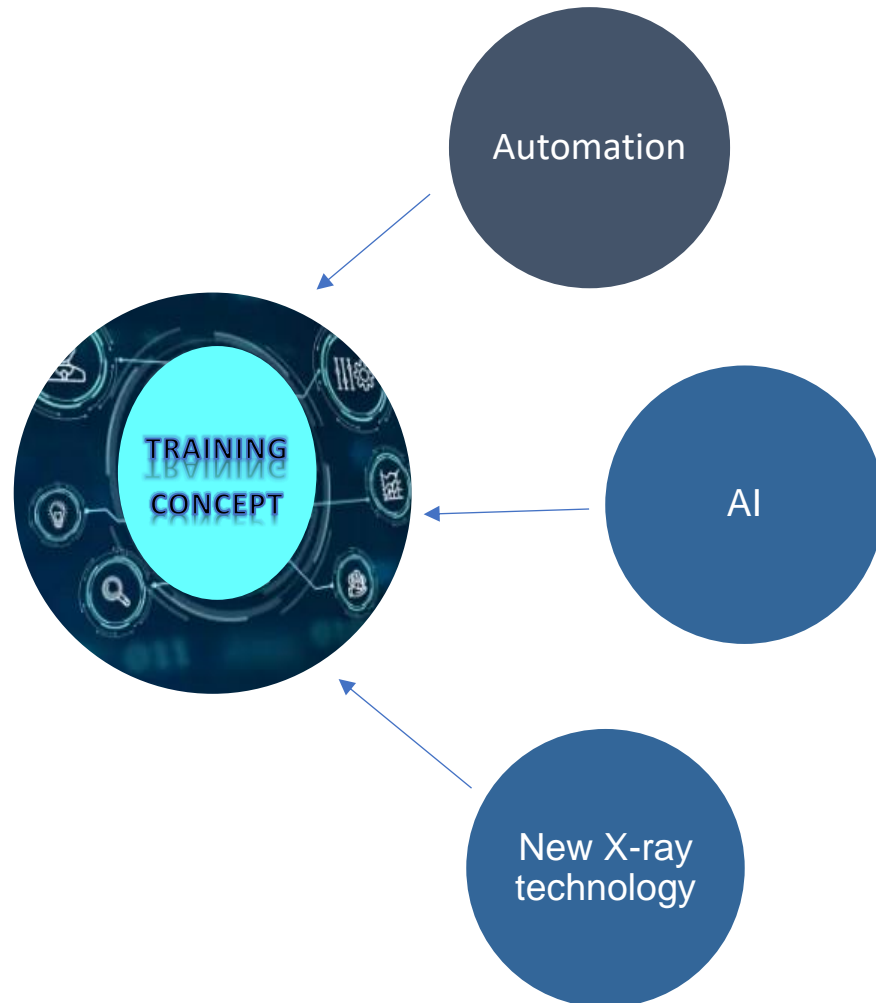

Training to identify objects in different rotations, when superimposed by other objects and in complex images

Display of training images tailored to the knowledge and skills of each individual

**Increasing detection performance while decreasing response time despite geographical dispersion**

# Evolving Role for the X-Ray Image Analyst

## Training and Evaluation of new Systems and Technologies (TEST)

- Shift towards a **more expert role** for screening officers
  - Interpret and resolve alarm frames from different sources
  - More complexity and autonomy on task
  - More knowledge about technology and objects
- New challenges for training
  - Training needs to empower the screener
  - Training needs to enhance knowledge about forbidden objects and everyday objects
  - Training needs to be more in depth and not only simulate the decision itself

# Evolving Role for the X-Ray Image Analyst

## Training and Evaluation of new Systems and Technologies (TEST)

- › Local vs remote screening

- › With local screening, officers can communicate and work as a team

# Evolving Role for the X-Ray Image Analyst

## Training and Evaluation of new Systems and Technologies (TEST)

### › Local vs remote screening

- › With remote setting, the screening tasks needs to decide and take action based on own judgement only

# Evolving Role for the X-Ray Image Analyst

## Training and Evaluation of new Systems and Technologies (TEST)

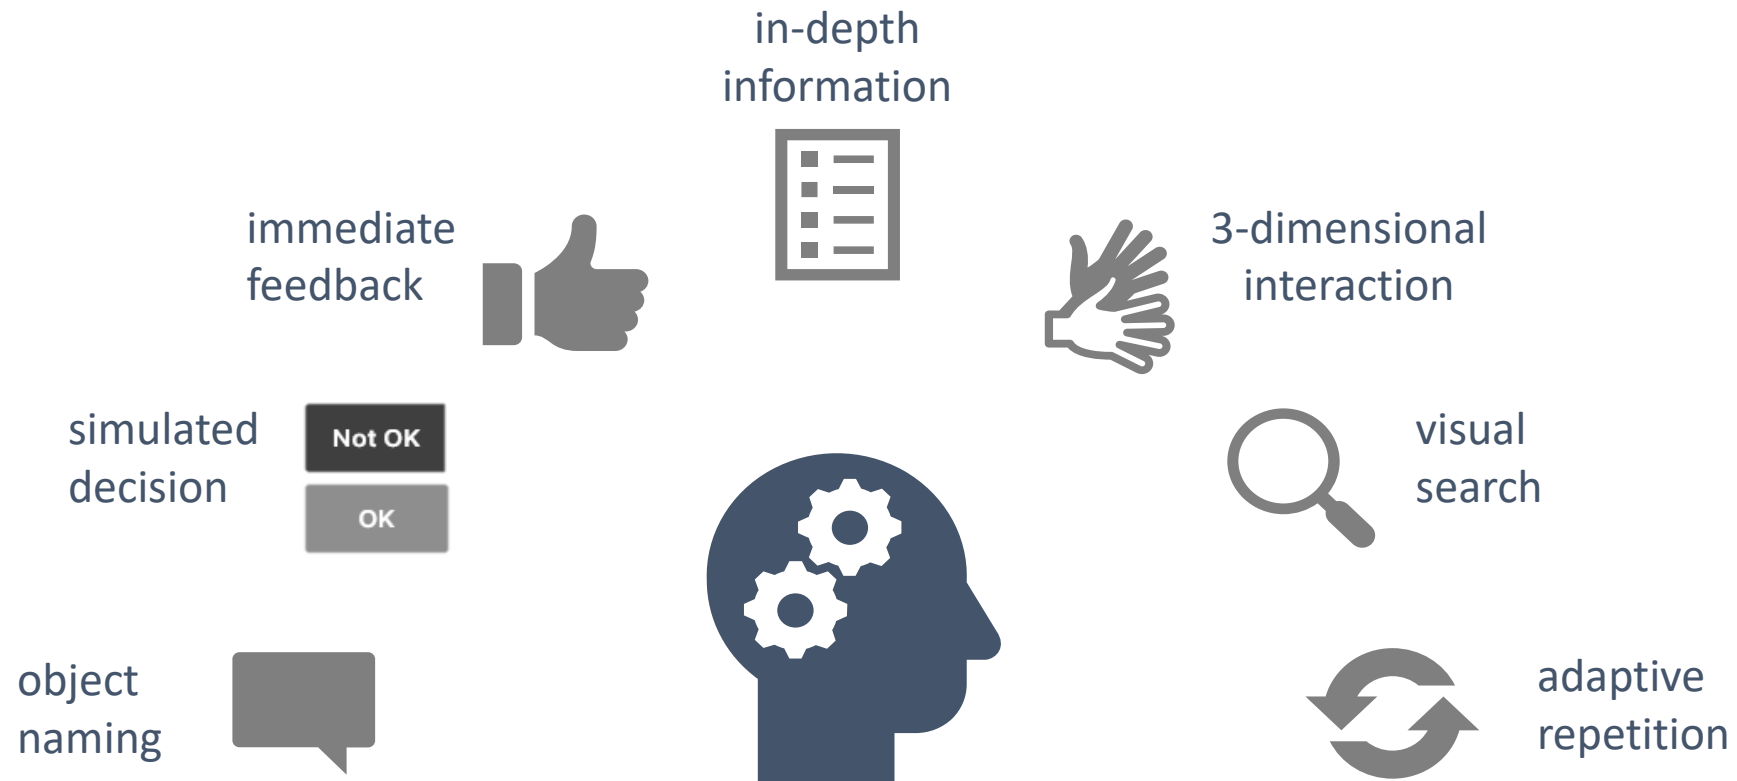

- › Local vs remote screening

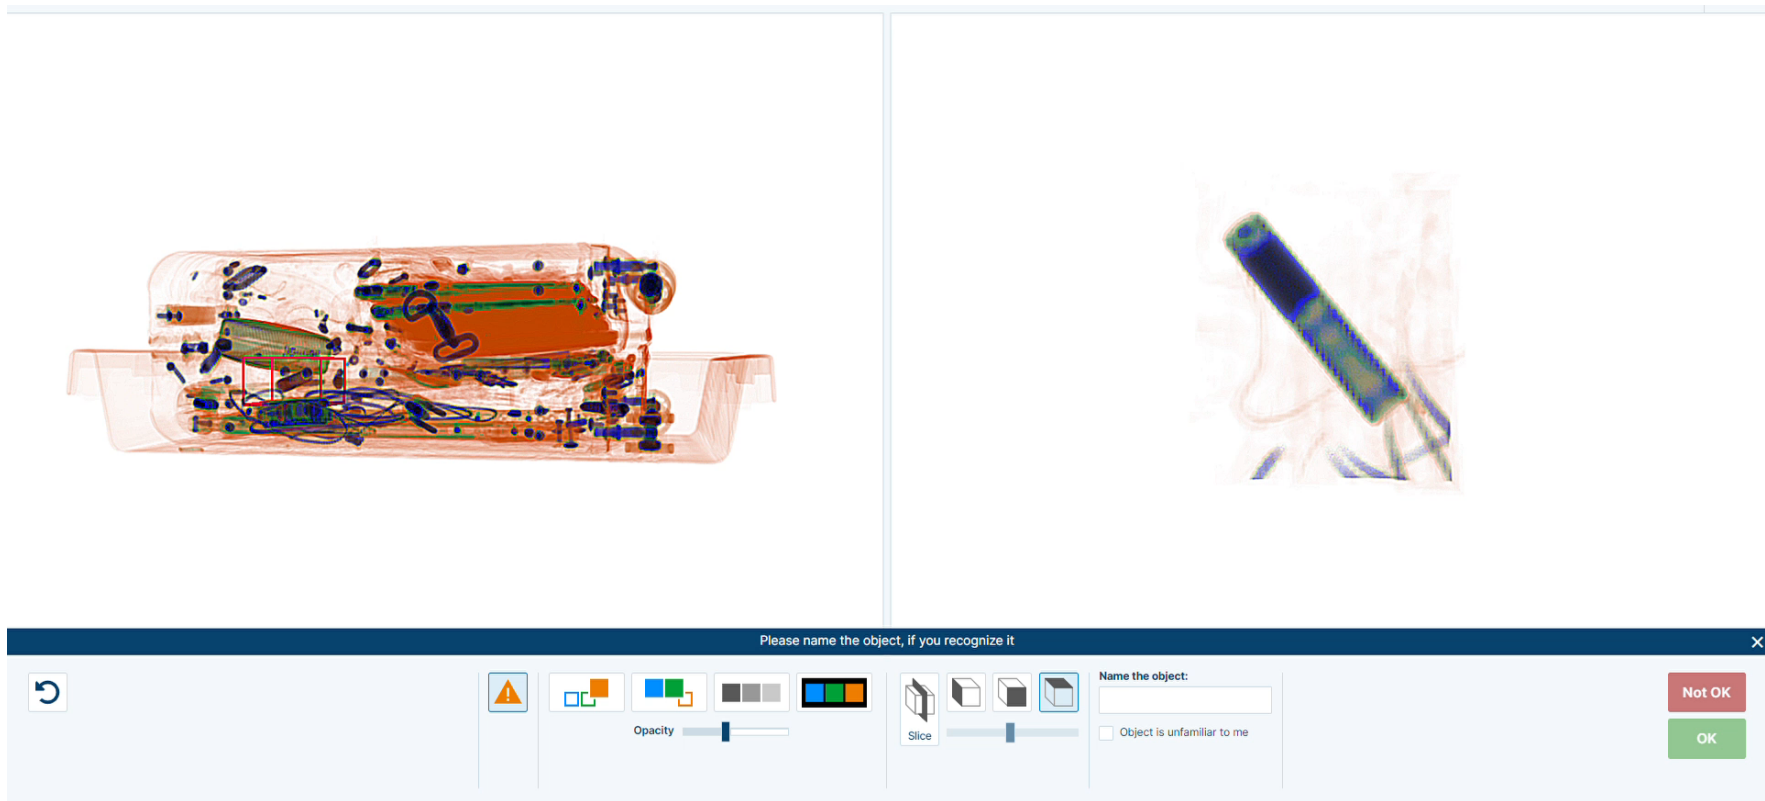

- › With remote screening, the screening task also needs to provide decisions without having verbal information from the image analyst
