MTS
Core Team

The **MTS Core Team** members started building their practical experiences and core technical competencies in many countries as early as 1990. Today,the team has decades of profound knowledge, practical exposure, and hands-on experience in the various aspects of trade & business community services, transaction data processing, business intelligence, and analytics, all of which constitute elementary foundation blocks to implement smart and modern solutions. Such wholistic experience represents a critical success factor for developing ICT-based solutions that address the actual problems and challenges of the various stakeholders of the trade and transport community.

MTS Core Team has a sound and proven track record which includes the development of business solutions, systems implementation, and integration to serve clients at the national level including Customs Authority, Control Agencies, Port Authorities, Data Banks, Prosecutions for Criminal Justice, and others. The track record also includes projects that served Shipping Line Agencies and Container Terminals. Such projects empowered the MTS team with a holistic experience that enabled MTS to win a national project to develop, operate and manage the Egyptian National Single Window platform for trade across borders (AKA "NAFEZA").
