Your challenges, our expertise

Mobilised revenue, secured public service foundations

Dematerialisation and automation will allow you to broaden your tax base, increase your revenue and improve the efficiency of public expenditure.

Smooth processes, improved satisfaction

Administrative simplification and improving the user experience are key to ensure that public action is efficient and that commitments to the citizens are met.

Organised data, optimised performance

Our integrated solutions help make the data you have reliable by ensuring that it is consistent and shared between government departments.

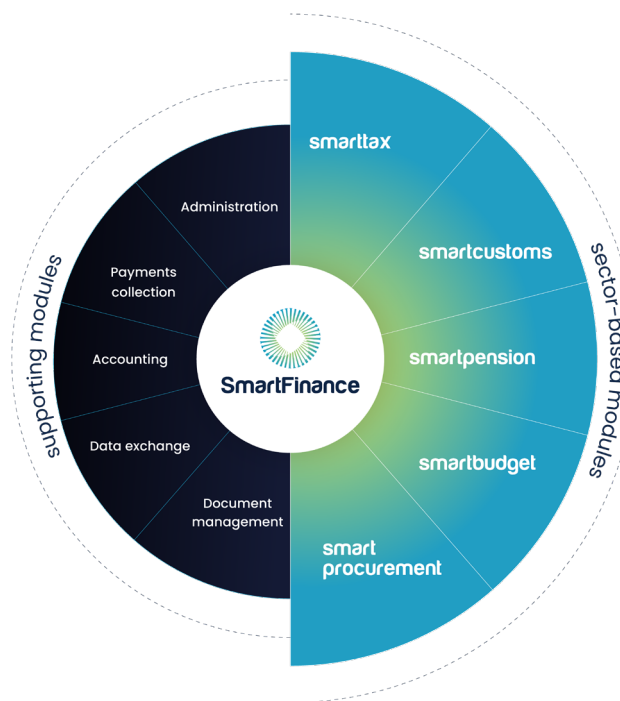

Digitalized procedures, secured action

Digitalizing administrative procedures is key to make them transparent and secure. The public agents' work is centralised and gains in productivity.

Real-time control, informed decisions

Our integrated solutions provide decision-makers with audit recommendation and consolidated information essential to the transparency of public action and to the orientation of policies.

Our integrated sector-based value proposition

**1 solution,
5 operating
modules**

Ika offers a SmartFinance software suite incorporating sector-based modules that specifically address the various challenges of public finance, all the while ensuring cross-functional management, data sharing and pooled reporting in real time. These modules can be implemented individually or in combination.

Our public finance management solutions

smarttax

A solution for the global management of your tax revenues

We provide tax authorities with an innovative solution for the modernisation of tax collection, recovery, and control. The objective is to improve your operations through automated processes and risk analysis using artificial intelligence.

smartcustom

A solution for the global management of customs clearance operations for import and export

We provide a single, secured interface enabling stakeholders (consignees, customs brokers, stevedores, economic operators) and customs authorities to carry out all their customs operations. The objective is to guarantee exhaustive tracking of goods for both import and export: value management, manifests, declarations, control and exit of goods, while securing the various methods of payment of duties and taxes.

smartbudget

A solution for the global management of your expenses channels.

We provide budget administrations with an innovative solution designed to modernise and digitise the budget management process. The objective is to offer a tool that unites managers, authorising officers, controllers, and accountants based on the principles of Programme Budgeting.

smartprocurement

A solution for full dematerialisation of your public procurement operations

We provide an innovative solution for the digitisation of public procurement processes: online publication of calls for tender, electronic submission, digital scrutiny and contract awarding. The objective is to ensure that all players, whether they are the contracting authority, the administration in charge of control or approval, the economic operator or the member of the judging committee, can interact using a single tool to ensure swift processing and traceability of actions.

smartpension

A solution designed to manage social security contributions and benefits

We provide social security organisations with an innovative solution for digitising all their business activities: from collecting contributions to calculating and paying benefits. The objective is to offer comprehensive, real-time management of your members, customers and beneficiaries: careers, family groupings, contributions, individual accounts, entitlements and benefits paid out.
