

Weng Meng Bags New Product Award at Archidex 2019

Weng Meng Industries' Sandor HAWA SUONO Acoustic Sliding Timber Door clinched the coveted New Product Award at the recently concluded 20th International Architecture, Interior Design and Building Exhibition (Archidex) 2019*. This award is aimed at discovering the industry's most exciting product introductions with the best form and functionality. This win serves as incredible market validation for the superior form and functionality of the Sandor Hawa Suono range.

The Sandor Hawa Suono Acoustic Sliding Timber Door is the lightest acoustic sliding door in the world. It is the first to market in Malaysia and boasts the highest acoustic rating internationally. It is the product of a marriage between Swiss technology, through the Hawa Suono soundproof sliding solution, and Malaysian manufacturing prowess through Sandor's Total Door Solutions.

This range of doors is technically brilliant and revolutionary in its ability to keep out noise and smells, whilst looking modern and classy. It has been certified for soundproofing up to 36 decibels and features a patented 3D movement which creates space for more design options and new applications. This door solution also helps protect spaces from dust, prevents draughts, shuts out odours and avoids light permeation. It is designed to ensure efficient installation as the fitting, door and frame are combined as one unit.

*Archidex 2019 is South East Asia's most successful annual industry trade event for the architecture, interior design and building fraternity. The exhibition is widely recognised as a leading event that draws together South East Asia's fraternity of architects, interior designers, developers, urban planners, engineers, academicians, students and various related industry professionals.
