guide motivated clinicians
towards predictable, evidence
based dental practice. Expert
on Dental XP, the largest portal
for online education in the
world. Founder member:
Indian Academy of Laser
Dentistry.

“Fast Tracking Implant Prosthodontics”

Restorations of full arch implant supported fixed dentures is a time consuming process. It requires multiple appointments, which can be a deterrent for elderly patients, and time bound patients. A novel technique with reduced errors for recording impressions and jaw relation records for full arch cases will be presented during this lecture. The technique entails conversion from fixed provisional to definitive restoration in only 1 appointment!
