

ABSTRACT - DR. KHAW CHONG HUI

Two is Better Than One: Treating T2D with G.R.A.C.E

The T2DM treatment landscape has evolved rapidly over the following decade due to the discovery of proven agents to reduce mortality outcomes through organ protection such as the SGLT2 inhibitor.

Ever since then, experts have often debated if glucose lowering should still be prioritized, or the use of these newer organ protective agents.

In this session, Dr. Khaw Chong Hui, will share with us on how we can still prioritize glucose lowering and organ protection at the core of T2DM treatment, through a fixed-dose combination with **G.R.A.C.E** (**G**lucose-lowering efficacy, **R**enal benefits of SGLT2i, importance of **A**dherence to therapy, **C**ardiac benefits and **E**rror-free strategies).
