

Management of Diabetic Foot Ulcers

“ Three Healing Gestures” is the way that one of the oldest medical paper described the science of wound healing 2200 BC. The 3 healing gestures were cleaning the wound, sticking plaster, and bandaging the wound. (Ghomi et al 2019)

Louis Pasteur and Joseph Lister were the pioneers on identifying the reasons for infection and the ways to prevent it

The goal of wound management is to provide the ideal environment for the wound to heal. A warm, moist and non-toxic healing environment provides the best conditions for the wound to heal naturally.

The talk will focus on principles of management of diabetics foot ulcers and recent guidelines.

Dr. Jagdish Krishnan

Consultant Orthopaedic Surgeon, Gleneagles Penang
