

ABSTRACT

Management of Ocular Emergencies in GP Practice

Introduction

A power point presentation on the common eye emergencies seen by general practitioners and first line management of these ocular emergencies.

Objective

To educate and reassure general practitioners on first line management and how to identify these ocular emergencies.

Methods

Power point presentation with picture slides and explanations.

Discussion

This presentation focuses on the common ocular emergencies that present to the general practitioners in Malaysia. It focuses on how these conditions present, the findings that may or may not be present and how to look for them. It also highlights the first line treatment general practitioners may employ to ensure the best treatment for patients.

Conclusion

General practitioners are an important part of the medical ecosystem. Their prompt recognition and treatment may result sight saving measures for the patient.
