

# Smart integration of your POS system with GV-VMS

## Loss Prevention and Evidence Gathering

With the development of technology, Geovision provides the most advanced POS integration software.

Using easy way to integrate your Windows-based POS systems to GV-VMS. It allows POS transactions to be automatically embedded into recorded video, and sync to the GV-Cloud platform.

Retailers can quickly find particular transaction using keywords and get automatically notified with suspicious transactions.

These features can help owners reduce cash shortages, losses, and improve operations without hassle.

GV-VMS

# Application

Supermarket

Shopping Mall

Bank

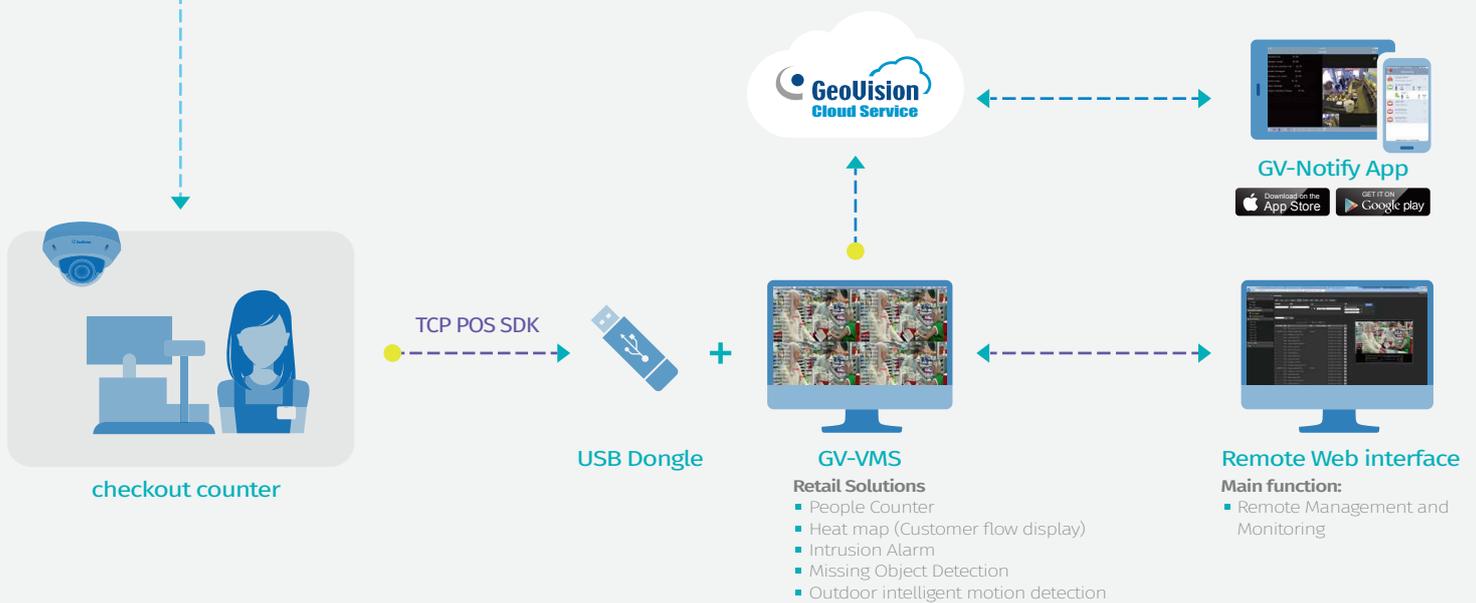

Self-service Machine

Restaurant

## How It Works?

## Key Features

### Employee Steal From VOID Transaction

Receipt

When customer left invoice on table, employee void transaction, and get money in pocket. Retailer can quickly find suspicious transactions and gather evidence from void transaction video.

### Real-Time Instant Event Detection

Predefined keywords or amount of abnormal transactions, such as void or specific amount, etc. Automatically alarm trigger when event occurs. Also retailer will receive notification and Pop-up messages simultaneously.

NotifyApp  
Supermarket - Camera2: Motion

### Abnormal POS Cash Drawer open Combined with GV-IOBox integration

Automatically start IP cam recording, when someone opens POS cash drawer overtime. The event can be sent to GV-VMS platform and Geovision 3D E-map in real-time.

GV-VMS

- Cloud-based platform.
- POS transaction overlay on live view and recordings.
